

Slider Type

LEF Series

* For details, refer to page 1343 and onward.

Size: 16, 25, 32, 40

Battery-less Absolute (Step Motor 24 VDC)

Incremental (Step Motor 24 VDC)

Incremental (Servo Motor 24 VDC)

Ball Screw Drive LEFS Series

Size: 16, 25, 32, 40 ▶ p. 105, 113

Max. work load: **65 kg** Max. speed: **1200 mm/s**

Positioning repeatability: **±0.015 mm** (High-precision type)

Clean room specification also available*1

*1 For the incremental type

Motor parallel type **11-LEFS**

Clean room specification ▶ p. 113

Belt Drive LEFB Series

Size: 16, 25, 32 ▶ p. 105, 113

Max. stroke: **2000 mm**

Max. speed: **2000*1 mm/s**

*1 For the incremental type

AC Servo Motor

Ball Screw Drive LEFS Series

Size: 25, 32, 40 ▶ p. 121, 129

Positioning repeatability: **±0.01 mm** (High-precision type)

Improved high-speed transfer ability Max. speed: **1500 mm/s**

High acceleration/deceleration: **20000 mm/s²**

Pulse input type

With internal absolute encoder (For the LECSB-T/C-T/S-T and LECY)

Clean room specification also available

Motor parallel type **11-LEFS**

Clean room specification ▶ p. 121, 129

Belt Drive LEFB Series

Size: 25, 32, 40 ▶ p. 131

Max. speed: **2000 mm/s**

Max. stroke: **3000 mm**

Max. acceleration/deceleration: **20000 mm/s²**

Motor bottom mounting type also available

Motor bottom mounting type

Incremental (Step Motor 24 VDC)

Slider Type *LEF Series*

Battery-less Absolute (Step Motor 24 VDC)

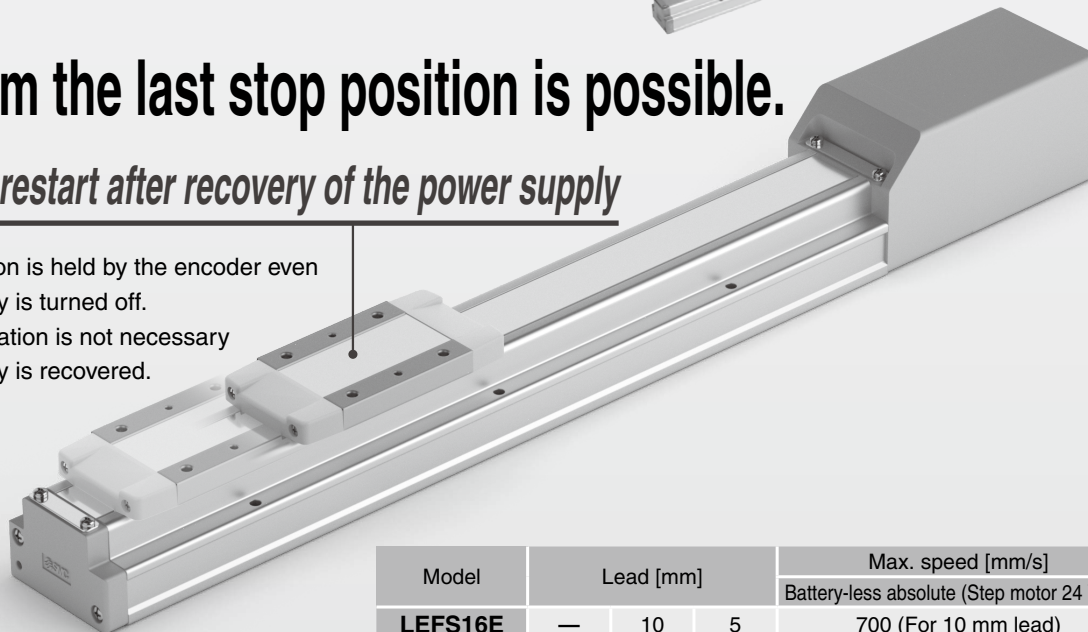

Ball Screw Drive/LEFS□E Series Size: 16, 25, 32, 40

Restart from the last stop position is possible.

Easy operation restart after recovery of the power supply

The position information is held by the encoder even when the power supply is turned off. A return to origin operation is not necessary when the power supply is recovered.

Model	Lead [mm]			Max. speed [mm/s]
				Battery-less absolute (Step motor 24 VDC)
LEFS16E	—	10	5	700 (For 10 mm lead)
LEFS25E	20	12	6	1100 (For 20 mm lead)
LEFS32E	24	16	8	1200 (For 24 mm lead)
LEFS40E	30	20	10	1200 (For 30 mm lead)

Does not require the use of batteries.
Reduced maintenance

Batteries are not used to store the position information. Therefore, there is no need to store spare batteries or replace dead batteries.

Max. work load: **65 kg**
Positioning repeatability: **±0.02 mm**
(±0.015 mm for the LEFSH□E)

Belt Drive/LEFB□E Series Size: 16, 25, 32

Max. stroke: **2000 mm**

Max. speed: **1500 mm/s**

Model	Equivalent lead [mm]	Max. speed [mm/s]
		Battery-less absolute (Step motor 24 VDC)
LEFB16E	48	1100
LEFB25E		1400
LEFB32E		1500

Battery-less Absolute (Step Motor 24 VDC)

Incremental (Step Motor 24 VDC)

Incremental (Servo Motor 24 VDC)

● Easy mounting of the body/Reduction in installation labor

It is possible to mount the main body without removing the external cover, etc.

Equipped with seal bands as standard

Covers the guide, ball screw, and belt
Prevents grease from splashing and external foreign matter from entering

● The auto switch can be used to detect the position of the table. * Excludes size 16

● Up to 2 auto switches can be mounted on each side of the body.

Incremental (Step Motor 24 VDC)

Incremental (Servo Motor 24 VDC)

Ball Screw Drive/LEFS Series Size: 16, 25, 32, 40

Model	Lead [mm]			Max. speed [mm/s]*1
				Incremental (Step motor 24 VDC)
LEFS16	—	10	5	700 (For 10 mm lead)
LEFS25	20	12	6	1100 (For 20 mm lead)
LEFS32	24	16	8	1200 (For 24 mm lead)
LEFS40	30	20	10	1200 (For 30 mm lead)

*1 Excludes the LECPA

Max. work load: **65 kg**
 Positioning repeatability: **±0.02 mm**
 (±0.015 mm for the LEFSH)

Slider type with lower height

Size	Height [mm]
16	40
25	48
32	60
40	68

Motor parallel type available!

Compatible motors

- **Step motor (Servo/24 VDC)**
Ideal for the low-speed transfer of heavy loads
- **Servo motor (24 VDC)**
Stable at high speeds Silent operation

Non-magnetizing lock mechanism (Option)

For drop prevention in the case of a power failure (Maintained)*1
 *1 The LEFB belt drive actuator cannot be used for vertical applications.

Slider type with lower height

Belt Drive/LEFB Series Size: 16, 25, 32

Max. stroke: **2000 mm**
 Max. speed: **2000 mm/s**

AC Servo Motor

Ball Screw Drive/*LEFS Series* Size: 25, 32, 40

Model	Lead [mm]			Max. speed [mm/s]
				AC servo motor
LEFS25	20	12	6	1500
LEFS32	24	16	8	1500
LEFS40	30	20	10	1500

High-output motor (100/200/400 W)

Improved high-speed transfer ability

High acceleration/deceleration compatible: **20000** mm/s²

Pulse input type

With internal absolute encoder (For the LECSB-T/C-T/S-T and LECY)

Motor parallel type available!

◎ Motor mounting position can be selected from two directions (Right or Left).

Belt Drive/*LEFB Series* Size: 25, 32, 40

Max. speed: **2000** mm/s

Max. stroke: **3000** mm

Max. acceleration/deceleration: **20000** mm/s²

Incremental (Step Motor 24 VDC)

Clean Room Specification

Ball Screw Drive/11-LEFS Series

ISO Class 4*1 (ISO 14644-1)

- Built-in vacuum piping
- It is possible to mount the main body without removing the external cover, etc.
- Body-integrated linear guide specification

*1 Changes depending on the suction flow rate
Refer to pages 940 and 941 for details.

Vacuum suction minimizes external particle generation from the ball screw and guide.

Support Guide/LEFG Series

The support guide was designed to support workpieces with significant overhang.

- As the dimensions are the same as the LEF series body, installation is simple and contributes to a reduction in installation and assembly labor.
- The standard-equipped seal bands prevent grease from splashing and external foreign matter from entering.

Application example

Caution

After installing the actuator on the drive side, align it with the support guide. If the mounting flatness exceeds 0.1, install a floating mechanism separately on the workpiece installation surface (table).

For details, refer to page 136.

Slider Type *LEF Series*

Application Examples

For precise positioning of workpieces

For load and unload transfer of workpieces

Selection Procedure

Selection Example

Operating conditions

- Workpiece mass: 5 [kg]
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s²]
- Stroke: 200 [mm]
- Mounting orientation: Horizontal upward
- Workpiece mounting condition:

Step 1 Check the work load-speed. <Speed-Work load graph> (pages 106 to 108)
Select a model based on the workpiece mass and speed while referencing the speed-work load graph.

Selection example) The LEFS25EA-200 can be temporarily selected as a possible candidate based on the graph shown on the right side.

Step 2 Check the cycle time.

Calculate the cycle time using the following calculation method.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load and in position of the step data. Therefore, calculate the settling time while referencing the following value.

$$T4 = 0.2 \text{ [s]}$$

Calculation example)

T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 300/3000 = 0.1 \text{ [s]}$$

$$T3 = V/a2 = 300/3000 = 0.1 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{200 - 0.5 \cdot 300 \cdot (0.1 + 0.1)}{300} = 0.57 \text{ [s]}$$

$$T4 = 0.2 \text{ [s]}$$

The cycle time can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.1 + 0.57 + 0.1 + 0.2 = 0.97 \text{ [s]}$$

L : Stroke [mm] ... (Operating condition)
V : Speed [mm/s] ... (Operating condition)
a1: Acceleration [mm/s²] ... (Operating condition)
a2: Deceleration [mm/s²] ... (Operating condition)

- T1: Acceleration time [s]
Time until reaching the set speed
- T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
- T3: Deceleration time [s]
Time from the beginning of the constant speed operation to stop
- T4: Settling time [s]
Time until positioning is completed

Step 3 Check the allowable moment.

<Static allowable moment> (page 108)
<Dynamic allowable moment> (page 109)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the LEFS25EA-200 should be selected.

Calculation of Guide Load Factor

1. Decide operating conditions.

Model: LEFS/LEFB

Size: 16/25/32/40

Acceleration [mm/s²]: a

Work load [kg]: m

Mounting orientation: Horizontal/Bottom/Wall/Vertical

Work load center position [mm]: Xc/Yc/Zc

2. Select the target graph while referencing the model, size, and mounting orientation.

3. Based on the acceleration and work load, find the overhang [mm]: Lx/Ly/Lz from the graph.

4. Calculate the load factor for each direction.

$$\alpha_x = X_c/L_x, \alpha_y = Y_c/L_y, \alpha_z = Z_c/L_z$$

5. Confirm the total of α_x , α_y , and α_z is 1 or less.

$$\alpha_x + \alpha_y + \alpha_z \leq 1$$

When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

Mounting orientation

Example

1. Operating conditions

Model: LEFS40

Size: 40

Mounting orientation: Horizontal

Acceleration [mm/s²]: 3000

Work load [kg]: 20

Work load center position [mm]: Xc = 0, Yc = 50, Zc = 200

2. Select the graphs for horizontal of the LEF40 on page 109.

3. Lx = 400 mm, Ly = 250 mm, Lz = 1500 mm

4. The load factor for each direction can be found as follows.

$$\alpha_x = 0/400 = 0$$

$$\alpha_y = 50/250 = 0.2$$

$$\alpha_z = 200/1500 = 0.13$$

5. $\alpha_x + \alpha_y + \alpha_z = 0.33 \leq 1$

Model Selection

LEFS Series ▶ p. 116 **LEFB Series ▶ p. 227** **11-LEFS Series ▶ p. 943**

25A-LEFS Series ▶ p. 975

Selection Procedure

Selection Example

Operating conditions

- Workpiece mass: 5 [kg]
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s²]
- Stroke: 200 [mm]
- Mounting orientation: Horizontal upward
- Workpiece mounting condition:

<Speed-Work load graph> (LEFS25)

Step 1 Check the work load-speed. <Speed-Work load graph> (pages 114 to 117)

Select a model based on the workpiece mass and speed while referencing the speed-work load graph.
Selection example) The **LEFS25A-200** can be temporarily selected as a possible candidate based on the graph shown on the right side.

Step 2 Check the cycle time.

Calculate the **cycle time** using the following calculation method.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the conditions such as motor types, load and in position of the step data. Therefore, calculate the settling time while referencing to the following value.

$$T4 = 0.2 \text{ [s]}$$

Calculation example)

T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 300/3000 = 0.1 \text{ [s]}$$

$$T3 = V/a2 = 300/3000 = 0.1 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{200 - 0.5 \cdot 300 \cdot (0.1 + 0.1)}{300} = 0.57 \text{ [s]}$$

$$T4 = 0.2 \text{ [s]}$$

The **cycle time** can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.1 + 0.57 + 0.1 + 0.2 = 0.97 \text{ [s]}$$

- L : Stroke [mm] ... (Operating condition)
- V : Speed [mm/s] ... (Operating condition)
- a1: Acceleration [mm/s²] ... (Operating condition)
- a2: Deceleration [mm/s²] ... (Operating condition)

- T1: Acceleration time [s]
Time until reaching the set speed
- T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
- T3: Deceleration time [s]
Time from the beginning of the constant speed operation to stop
- T4: Settling time [s]
Time until positioning is completed

Step 3 Check the allowable moment. <Static allowable moment> (page 117)

<Dynamic allowable moment> (page 118)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LEFS25A-200** should be selected.

* If the step motor and servo motors do not meet your specifications, also consider the AC servo specification on page 121.

High-precision type

Model Selection

LEFS Series ▶ p. 182 **LECY Series** ▶ p. 198 **11-LEFS Series** ▶ p. 953 **25A-LEFS Series** ▶ p. 979

Selection Procedure

Selection Example

Operating conditions

- Workpiece mass: 45 [kg]
 - Speed: 300 [mm/s]
 - Acceleration/Deceleration: 3000 [mm/s²]
 - Stroke: 200 [mm]
 - Mounting position: Horizontal upward
- Workpiece mounting condition:
-

Step 1 Check the work load-speed. <Speed-Work load graph> (page 122)

Select a model based on the workpiece mass and speed while referencing the speed-work load graph.
Selection example) The **LEFS40S4B-200** can be temporarily selected as a possible candidate based on the graph shown on the right side.

Step 2 Check the cycle time.

Calculate the **cycle time** using the following calculation method.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the motor type and load. The value below is recommended.

$$T4 = 0.05 \text{ [s]}$$

Calculation example)
T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 300/3000 = 0.1 \text{ [s]}$$

$$T3 = V/a2 = 300/3000 = 0.1 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{200 - 0.5 \cdot 300 \cdot (0.1 + 0.1)}{300} = 0.57 \text{ [s]}$$

$$T4 = 0.05 \text{ [s]}$$

The **cycle time** can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.1 + 0.57 + 0.1 + 0.05 = 0.82 \text{ [s]}$$

L : Stroke [mm] ... (Operating condition)
V : Speed [mm/s] ... (Operating condition)
a1 : Acceleration [mm/s²] ... (Operating condition)
a2 : Deceleration [mm/s²] ... (Operating condition)

- T1: Acceleration time [s]
Time until reaching the set speed
- T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
- T3: Deceleration time [s]
Time from the beginning of the constant speed operation to stop
- T4: Settling time [s]
Time until positioning is completed

Step 3 Check the allowable moment. <Static allowable moment> (page 117) <Dynamic allowable moment> (page 126)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LEFS40S4B-200** should be selected.

Speed-Work Load Graph/Required Conditions for the Regeneration Option (Guide)

Calculation of Guide Load Factor

- Decide operating conditions.

Model: LEFS

Size: 25/32/40

Mounting orientation: Horizontal/Bottom/Wall/Vertical

Acceleration [mm/s²]: a

Work load [kg]: m

Work load center position [mm]: Xc/Yc/Zc

- Select the target graph while referencing the model, size, and mounting orientation.

- Based on the acceleration and work load, find the overhang [mm]: Lx/Ly/Lz from the graph.

- Calculate the load factor for each direction.

$$\alpha_x = X_c/L_x, \alpha_y = Y_c/L_y, \alpha_z = Z_c/L_z$$

- Confirm the total of α_x , α_y , and α_z is 1 or less.

$$\alpha_x + \alpha_y + \alpha_z \leq 1$$

When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

Mounting orientation

Example

- Operating conditions

Model: LEFS40

Size: 40

Mounting orientation: Horizontal

Acceleration [mm/s²]: 3000

Work load [kg]: 20

Work load center position [mm]: Xc = 0, Yc = 50, Zc = 200

- Select the graphs for horizontal of the LEFS40 on page 126.

- Lx = 250 mm, Ly = 180 mm, Lz = 1000 mm

- The load factor for each direction can be found as follows.

$$\alpha_x = 0/250 = 0$$

$$\alpha_y = 50/180 = 0.27$$

$$\alpha_z = 200/1000 = 0.2$$

- $\alpha_x + \alpha_y + \alpha_z = 0.47 \leq 1$

Table Accuracy (Reference Value)

High-precision type

Model Selection

LECS □ Series ▶ p. 182

LEFS Series ▶ p. 198

11-LEFS Series ▶ p. 955

25A-LEFS Series ▶ p. 980

Selection Procedure

* The Work Load-Acceleration/Deceleration Graph, Dynamic Allowable Moment, Calculation of Guide Load Factor, and Table Accuracy/Displacement/Overhang Displacement are the same as those of the LECS □ AC servo motor. For details, refer to page 123 and onward.

Selection Example

Operating conditions

- Workpiece mass: 45 [kg]
- Speed: 300 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s²]
- Stroke: 200 [mm]
- Mounting position: Horizontal upward

• Workpiece mounting condition:

Step 1 Check the work load-speed. <Speed-Work load graph> (page 130)

Select a model based on the workpiece mass and speed while referencing the speed-work load graph.
Selection example) The **LEFS40V8B-200** can be temporarily selected as a possible candidate based on the graph shown on the right side.

Step 2 Check the cycle time.

Calculate the **cycle time** using the following calculation method.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the motor type and load. The value below is recommended.

$$T4 = 0.05 \text{ [s]}$$

Calculation example)
T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 300/3000 = 0.1 \text{ [s]}$$

$$T3 = V/a2 = 300/3000 = 0.1 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{200 - 0.5 \cdot 300 \cdot (0.1 + 0.1)}{300} = 0.57 \text{ [s]}$$

$$T4 = 0.05 \text{ [s]}$$

The **cycle time** can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.1 + 0.57 + 0.1 + 0.05 = 0.82 \text{ [s]}$$

L : Stroke [mm] ... (Operating condition)
V : Speed [mm/s] ... (Operating condition)
a1 : Acceleration [mm/s²] ... (Operating condition)
a2 : Deceleration [mm/s²] ... (Operating condition)

- T1: Acceleration time [s]
Time until reaching the set speed
- T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
- T3: Deceleration time [s]
Time from the beginning of the constant speed operation to stop
- T4: Settling time [s]
Time until positioning is completed

Step 3 Check the allowable moment. <Static allowable moment> (page 117) <Dynamic allowable moment> (page 126)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LEFS40V8B-200** should be selected.

Speed-Work Load Graph/Required Conditions for the Regenerative Resistor (Guide)

* The allowable speed is restricted depending on the stroke.
Select it by referring to the "Allowable Stroke Speed" below.

LEFS25/Ball Screw Drive

*1 The motor rotation speed is 1000 rpm.

AC Servo Motor Slider Type Belt Drive/LEFB Series Model Selection

LECS Series ▶ p. 238 LECY Series ▶ p. 254

Selection Procedure

Selection Example

Operating conditions

- Workpiece mass: 20 [kg]
- Speed: 1500 [mm/s]
- Acceleration/Deceleration: 3000 [mm/s²]
- Stroke: 2000 [mm]
- Mounting position: Horizontal upward
- Workpiece mounting condition:

Step 1 Check the work load-speed. <Speed-Work load graph> (page 132)

Select a model based on the workpiece mass and speed while referencing the speed-work load graph.
Selection example) The **LEFB40S4S-2000** can be temporarily selected as a possible candidate based on the graph shown on the right side.

Step 2 Check the cycle time.

Calculate the **cycle time** using the following calculation method.

Cycle time:

T can be found from the following equation.

$$T = T1 + T2 + T3 + T4 \text{ [s]}$$

- T1: Acceleration time and T3: Deceleration time can be found by the following equation.

$$T1 = V/a1 \text{ [s]} \quad T3 = V/a2 \text{ [s]}$$

- T2: Constant speed time can be found from the following equation.

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} \text{ [s]}$$

- T4: Settling time varies depending on the motor type and load. The value below is recommended.

$$T4 = 0.05 \text{ [s]}$$

Calculation example)
T1 to T4 can be calculated as follows.

$$T1 = V/a1 = 1500/3000 = 0.5 \text{ [s]}$$

$$T3 = V/a2 = 1500/3000 = 0.5 \text{ [s]}$$

$$T2 = \frac{L - 0.5 \cdot V \cdot (T1 + T3)}{V} = \frac{2000 - 0.5 \cdot 1500 \cdot (0.5 + 0.5)}{1500} = 0.83 \text{ [s]}$$

$$T4 = 0.05 \text{ [s]}$$

The **cycle time** can be found as follows.

$$T = T1 + T2 + T3 + T4 = 0.5 + 0.83 + 0.5 + 0.05 = 1.88 \text{ [s]}$$

- L : Stroke [mm] ... (Operating condition)
- V : Speed [mm/s] ... (Operating condition)
- a1 : Acceleration [mm/s²] ... (Operating condition)
- a2 : Deceleration [mm/s²] ... (Operating condition)

- T1: Acceleration time [s]
Time until reaching the set speed
- T2: Constant speed time [s]
Time while the actuator is operating at a constant speed
- T3: Deceleration time [s]
Time from the beginning of the constant speed operation to stop
- T4: Settling time [s]
Time until positioning is completed

Step 3 Check the allowable moment. <Static allowable moment> (page 117)

<Dynamic allowable moment> (page 133)

Confirm the moment that applies to the actuator is within the allowable range for both static and dynamic conditions.

Based on the above calculation result, the **LEFB40S4S-2000** should be selected.

Speed-Work Load Graph/Required Conditions for the Regeneration Option (Guide)

LEFB□/ Belt Drive

* The shaded area in the graph requires the regeneration option (LEC-MR-RB-032).

LEFB25 (Duty ratio)

LEFB32 (Duty ratio)

LEFB40 (Duty ratio)

Cycle Time Graph (Guide)

LEFB□/ Belt Drive

LEFB25/32/40

* Cycle time is for when maximum speed.

* Maximum stroke: LEFB25: 2000 mm
LEFB32: 2500 mm
LEFB40: 3000 mm

Regenerative resistor area

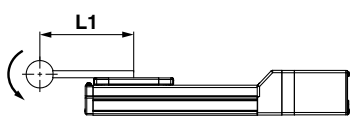

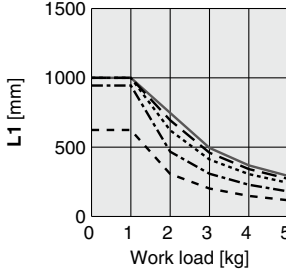

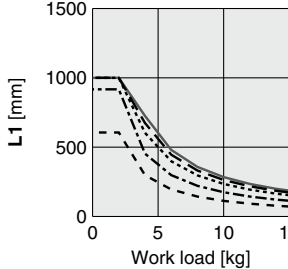

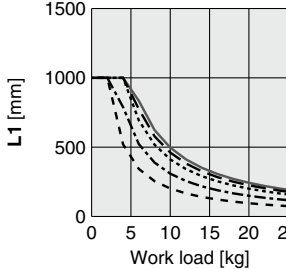

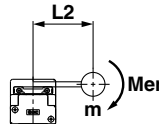

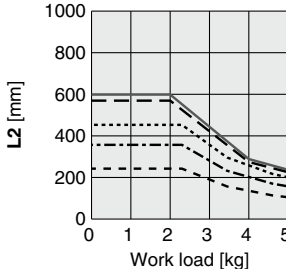

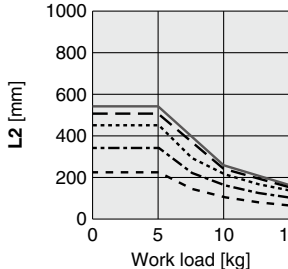

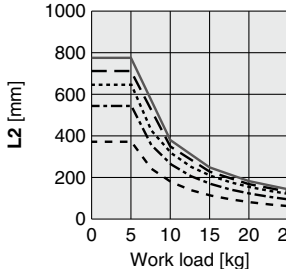

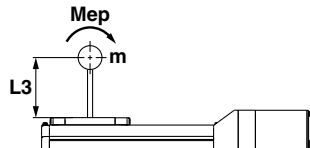

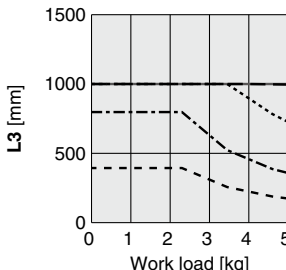

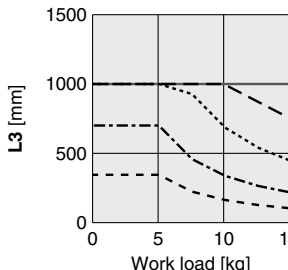

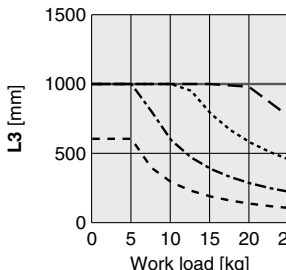

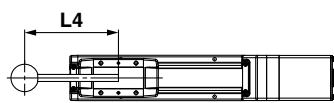

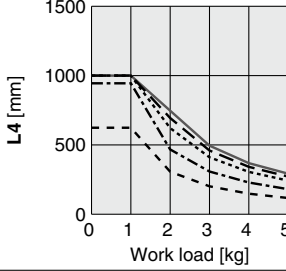

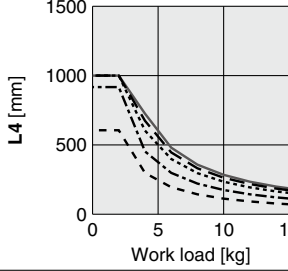

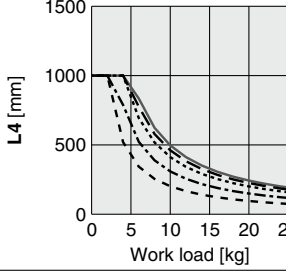

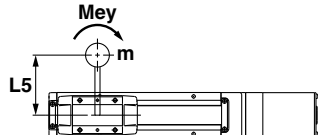

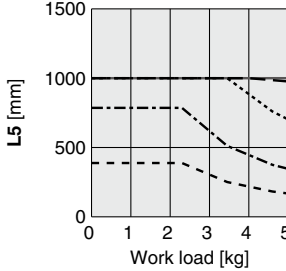

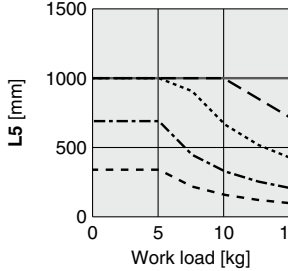

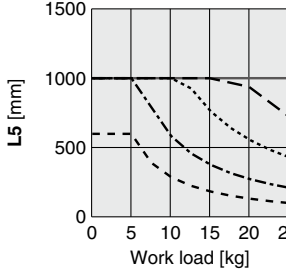

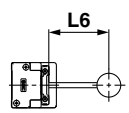

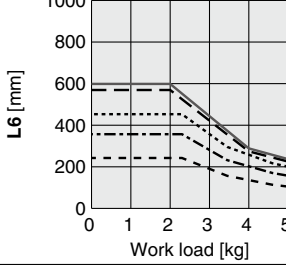

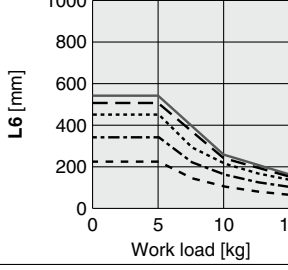

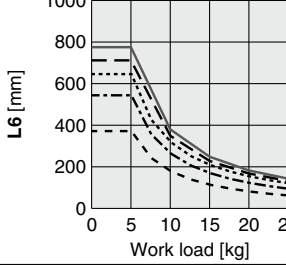

* When using the actuator in the regenerative resistor area, download the "AC servo drive capacity selection program/SigmaJunmaSize+" from the SMC website. Then, calculate the necessary regenerative resistor capacity to prepare an appropriate external regenerative resistor.

* The regenerative resistor should be provided by the customer.

* These graphs show the amount of allowable overhang (guide unit) when the center of gravity of the workpiece overhangs in one direction. When selecting the overhang, refer to the "Calculation of Guide Load Factor" or the Electric Actuator Model Selection Software for confirmation: <https://www.smcworld.com>

Dynamic Allowable Moment

Acceleration/Deceleration ——— 1000 mm/s² - - - 3000 mm/s² ····· 5000 mm/s² - - - - 10000 mm/s² - - - - 20000 mm/s²

Orientation	Load overhanging direction m : Work load [kg] Me: Allowable moment [N·m] L : Overhang to the work load center of gravity [mm]	Model		
		LEFB25	LEFB32	LEFB40
Horizontal/Bottom	 X L1 [mm]			
	 Y L2 [mm]			
	 Z L3 [mm]			
Wall	 X L4 [mm]			
	 Y L5 [mm]			
	 Z L6 [mm]			

Calculation of Guide Load Factor

- Decide operating conditions.

Model: LEFB

Size: 25/32/40

Mounting orientation: Horizontal/Bottom/Wall

Acceleration [mm/s^2]: **a**

Work load [kg]: **m**

Work load center position [mm]: **Xc/Yc/Zc**

- Select the target graph while referencing the model, size, and mounting orientation.

- Based on the acceleration and work load, find the overhang [mm]: **Lx/Ly/Lz** from the graph.

- Calculate the load factor for each direction.

$$\alpha_x = X_c/L_x, \alpha_y = Y_c/L_y, \alpha_z = Z_c/L_z$$

- Confirm the total of α_x , α_y , and α_z is 1 or less.

$$\alpha_x + \alpha_y + \alpha_z \leq 1$$

When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

Example

- Operating conditions

Model: LEFB40

Size: 40

Mounting orientation: Horizontal

Acceleration [mm/s^2]: 3000

Work load [kg]: 20

Work load center position [mm]: **Xc = 0, Yc = 50, Zc = 200**

- Select the graphs for horizontal of the LEFB40 on page 133.

- Lx = 250 mm, Ly = 180 mm, Lz = 1000 mm**

- The load factor for each direction can be found as follows.

$$\alpha_x = 0/250 = 0$$

$$\alpha_y = 50/180 = 0.27$$

$$\alpha_z = 200/1000 = 0.2$$

- $\alpha_x + \alpha_y + \alpha_z = 0.47 \leq 1$

Calculation of Guide Load Factor

- Decide operating conditions.

Model: LEFG

Size: 16/25/32/40

Mounting orientation: Horizontal/Bottom/Wall/Vertical

Acceleration [mm/s²]: a

Work load [kg]: m

Work load center position [mm]: Xc/Yc/Zc

- Select the target graph while referencing the model, size, and mounting orientation.

- Based on the acceleration and work load, find the overhang [mm]: Lx/Ly/Lz from the graph.

- Calculate the load factor for each direction.

$$\alpha_x = X_c/L_x, \alpha_y = Y_c/L_y, \alpha_z = Z_c/L_z$$

- Confirm the total of α_x , α_y , and α_z is 1 or less.

$$\alpha_x + \alpha_y + \alpha_z \leq 1$$

When 1 is exceeded, please consider a reduction of acceleration and work load, or a change of the work load center position and series.

Mounting orientation

Example

- Operating conditions

Model: LEFG40

Size: 40

Mounting orientation: Horizontal

Acceleration [mm/s²]: 3000

Work load [kg]: 20

Work load center position [mm]: Xc = 0, Yc = 50, Zc = 200

- Select the graphs for horizontal of the (11-)LEFG40 on page 137.

- Lx = 400 mm, Ly = 250 mm, Lz = 1500 mm

- The load factor for each direction can be found as follows.

$$\alpha_x = 0/400 = 0$$

$$\alpha_y = 50/250 = 0.2$$

$$\alpha_z = 200/1500 = 0.13$$

- $\alpha_x + \alpha_y + \alpha_z = 0.33 \leq 1$

- *1 Please contact SMC for non-standard strokes as they are produced as special orders.
- *2 Excludes the LEF16
- *3 If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 275.)
- *4 Order auto switches separately. (For details, refer to pages 276 to 278.)
- *5 When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.

- *6 Refer to the body mounting example on page 280 for the mounting method.
- *7 Produced upon receipt of order
- *8 The DIN rail is not included. It must be ordered separately.
- *9 Select "Nil" for anything other than DeviceNet®, CC-Link, or parallel input.
Select "Nil," "S," or "T" for DeviceNet® or CC-Link.
Select "Nil," "1," "3," or "5" for parallel input.

⚠ Caution

[CE/UKCA-compliant products]

EMC compliance was tested by combining the electric actuator LEF series and the controller JXC series.

The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.

[Precautions relating to differences in controller versions]

When the JXC series is to be used in combination with the battery-less absolute encoder, use a controller that is version V3.4 or S3.4 or higher. For details, refer to pages 1077 and 1078.

[UL certification]

The JXC series controllers used in combination with electric actuators are UL certified.

The actuator and controller are sold as a package.

Confirm that the combination of the controller and actuator is correct.

<Check the following before use.>

- ① Check the actuator label for the model number. This number should match that of the controller.
- ② Check that the Parallel I/O configuration matches (NPN or PNP).

- * Refer to the Operation Manual for using the products. Please download it via our website: <https://www.smcworld.com>

- *1 Please contact SMC for non-standard strokes as they are produced as special orders.
- *2 Speed changes according to the work load. Check the "Speed-Work Load Graph (Guide)" on pages 106 and 107. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m.
- *3 A reference value for correcting errors in reciprocal operation
- *4 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
- *5 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.
If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.
- *6 Indicates the max. power during operation (including the controller). This value can be used for the selection of the power supply.
- *7 With lock only
- *8 For an actuator with lock, add the power for the lock.

LEFS Series

Battery-less Absolute (Step Motor 24 VDC)

Dimensions: In-line Motor

LEFS16E

- *1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height: 5 mm)
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- *2 This is the distance within which the table can move when it returns to origin.
Make sure that workpieces mounted on the table do not interfere with other workpieces or the facilities around the table.
- *3 Position after returning to origin
- *4 [] for when the direction of return to origin has changed

- *1 Please contact SMC for non-standard strokes as they are produced as special orders.
- *2 Excluding the LEF16
- *3 If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 275.)
- *4 Order auto switches separately. (For details, refer to pages 276 to 278.)
- *5 When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.
- *6 Refer to the body mounting example on page 280 for the mounting method.
- *7 Produced upon receipt of order (Robotic cable only)
- *8 The standard cable should only be used on fixed parts. For use on moving parts, select the robotic cable. Refer to the [Web Catalog](#) if only the actuator cable is required.

- *9 For details on controllers/drivers and compatible motors, refer to the compatible controllers/drivers on the next page.
- *10 Only available for the motor type "Step motor"
- *11 When pulse signals are open collector, order the current limiting resistor (LEC-PA-R-□) on page 1062 separately.
- *12 When "Without controllers/drivers" is selected for controller/driver types, I/O cable cannot be selected. If an I/O cable is required, refer to the cable for the LECA6 ([Web Catalog](#)), LECP1 ([Web Catalog](#)), or LECPA ([Web Catalog](#)).
- *13 When "Pulse input type" is selected for controller/driver types, pulse input usable only with differential. Only 1.5 m cables usable with open collector
- *14 The DIN rail is not included. It must be ordered separately.
- *15 Select "Nil" for anything other than DeviceNet®, CC-Link, or parallel input. Select "Nil," "S," or "T" for DeviceNet® or CC-Link. Select "Nil," "1," "3," or "5" for parallel input.

⚠ Caution

[CE/UKCA-compliant products]

- ① EMC compliance was tested by combining the electric actuator LEF series and the controller LEC/JXC series. The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.
- ② For the incremental (servo motor 24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to page 1037 for the noise filter set. Refer to the LECA series Operation Manual for installation.

[UL-compliant products (For the LEC series)]

When compliance with UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

The actuator and controller/driver are sold as a package.

Confirm that the combination of the controller/driver and actuator is correct.

<Check the following before use.>

- ① Check the actuator label for the model number. This number should match that of the controller/driver.
- ② Check that the Parallel I/O configuration matches (NPN or PNP).

* Refer to the Operation Manual for using the products. Please download it via our website: <https://www.smcworld.com>

- *1 Please contact SMC for non-standard strokes as they are produced as special orders.
- *2 Speed changes according to the controller/driver type and work load. Check the "Speed-Work Load Graph (Guide)" on pages 114 and 115. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m.
- *3 A reference value for correcting errors in reciprocal operation
- *4 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
- *5 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.
If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.
- *6 Indicates the max. power during operation (including the controller)
This value can be used for the selection of the power supply.
- *7 With lock only
- *8 For an actuator with lock, add the power for the lock.

Positioning pin hole*5 (Option): Body bottom

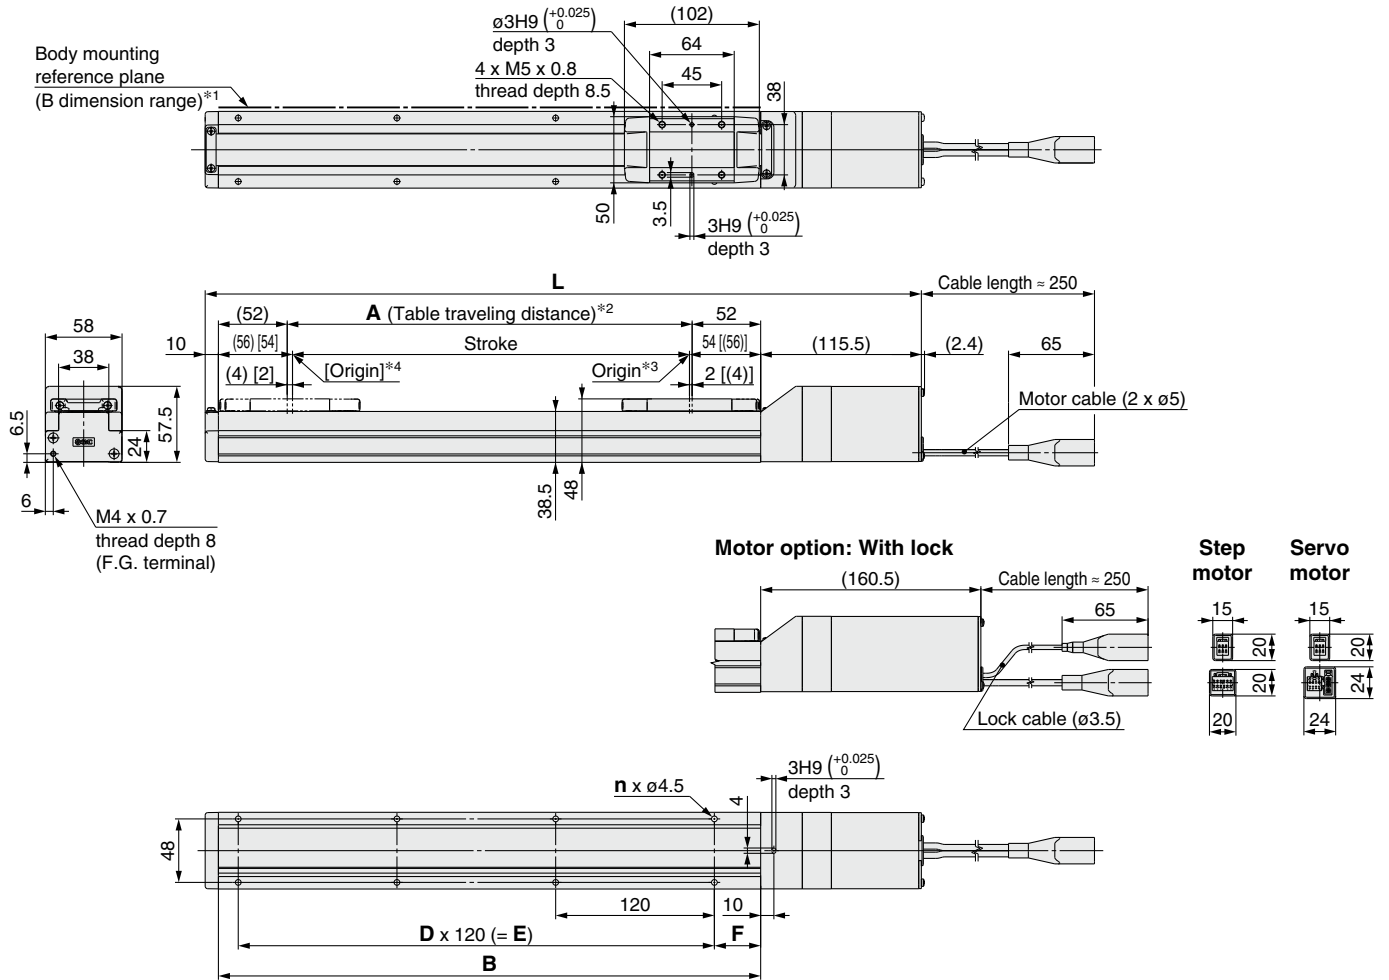

- *1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 2 mm or more because of round chamfering. (Recommended height: 5 mm)
 In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- *2 This is the distance within which the table can move when it returns to origin.
 Make sure that workpieces mounted on the table do not interfere with other workpieces or the facilities around the table.
- *3 Position after returning to origin
- *4 [] for when the direction of return to origin has changed
- *5 When using the body bottom positioning pin holes, do not simultaneously use the housing B bottom pin hole.

Positioning pin hole*5 (Option): Body bottom

- *1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 2 mm or more. (Recommended height: 5 mm) In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- *2 This is the distance within which the table can move when it returns to origin. Make sure that workpieces mounted on the table do not interfere with other workpieces or the facilities around the table.
- *3 Position after returning to origin
- *4 [] for when the direction of return to origin has changed
- *5 When using the body bottom positioning pin holes, do not simultaneously use the housing B bottom pin hole.

How to Order

LEFS **H** **32** **R** **S3** **B** - **200** **C** **N** **K** - **S** **2** **A2**

① ② ③ ④ ⑤ ⑥ ⑦ ⑧ ⑨ ⑩ ⑪ ⑫ ⑬ ⑭

① Accuracy

Nil	Basic type
H	High-precision type

② Size

25
32
40

③ Motor mounting position

Nil	In-line
R	Right side parallel
L	Left side parallel

⑤ Lead [mm]

Symbol	LEFS25	LEFS32	LEFS40
H	20	24	30
A	12	16	20
B	6	8	10

⑥ Stroke [mm]

50	50
to	to
1200	1200

⑦ Motor option

Nil	Without option
B	With lock

④ Motor type

Symbol	Type	Output [W]	② Size	⑬ Driver type	Compatible drivers
*1 S2	AC servo motor (Incremental encoder)	100	25	A1/A2	LECSA□-S1
S3		200	32	A1/A2	LECSA□-S3
S4		400	40	A2	LECSA2-S4
*2 T6	AC servo motor (Absolute encoder)	100	25	B2	LECSB2-T5
T7				C2	LECSC2-T5
				S2	LECSS2-T5
		B2	LECSB2-T7		
T8		200	32	C2	LECSC2-T7
				S2	LECSS2-T7
	B2			LECSB2-T8	
400	40	C2	LECSC2-T8		
		S2	LECSS2-T8		

*1 For motor type S2, the compatible driver part number suffix is S1.
*2 For motor type T6, the compatible driver part number is LECS□2-T5.

⑧ Auto switch compatibility

Nil	None
C	With (Includes 1 mounting bracket)

* If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 275.)
* Order auto switches separately. (For details, refer to pages 276 to 278.)
* When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.

⑨ Grease application (Seal band part)

Nil	With
N	Without (Roller specification)

⑩ Positioning pin hole

Nil	Housing B bottom*1	
K	Body bottom 2 locations	

*1 Refer to the body mounting example on page 280 for the mounting method.

⑬ Driver type

	Compatible drivers	Power supply voltage [V]	Size		
			25	32	40
Nil	Without driver	—	●	●	●
A1	LECSA1-S□	100 to 120	●	●	—
A2	LECSA2-S□	200 to 230	●	●	●
B2	LECSB2-T□	200 to 240	●	●	●
C2	LECSC2-T□	200 to 230	●	●	●
S2	LECSS2-T□	200 to 240	●	●	●

* When a driver type is selected, a cable is included. Select the cable type and cable length.
Example) S2S2: Standard cable (2 m) + Driver (LECSS2)
S2: Standard cable (2 m)
Nil: Without cable and driver

⑪ Cable type*1 *2

Nil	Without cable
S	Standard cable
R	Robotic cable

*1 A motor cable and encoder cable are included with the product. (A lock cable is also included if motor option "B: With lock" is selected.)
*2 Standard cable entry direction is "(B) Counter axis side." For motor parallel type of the ball screw drive, the cable entry direction is "(A) Axis side." (For details, refer to page 1123.)

⑫ Cable length*1 [m]

Nil	Without cable
2	2
5	5
A	10

*1 The length of the motor, encoder, and lock cables are the same.

Support Guide/LEFG Series

The support guide was designed to support workpieces with significant overhang.

⑭ I/O cable length [m]*1

Nil	Without cable
H	Without cable (Connector only)
1	1.5

*1 When "Nil: Without driver" is selected for the driver type, only "Nil: Without cable" can be selected.
Refer to page 1124 if an I/O cable is required. (Options are shown on page 1124.)

Type ^{*8}		Non-magnetizing lock											
Holding force [N]		78	131	255	131	197	385	220	330	660			
Power [W] at 20°C		6.3			7.9			7.9					
Rated voltage [V]		24 VDC ⁰ / _{-10%}											

- *1 Please contact SMC for non-standard strokes as they are produced as special orders.
- *2 For details, refer to the "Speed-Work Load Graph (Guide)" on page 122.
- *3 The allowable speed changes according to the stroke.
- *4 A reference value for correcting errors in reciprocal operation
- *5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with

- the actuator in the initial state.)
- *6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.
If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.
- *7 Indicates the max. power during operation (including the driver)
When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.
- *8 Only when motor option "With lock" is selected
- *9 For motor type T6, T7, and T8, the resolution will change depending on the driver type.

Dimensions: In-line Motor

LEFS25

- *1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height: 5 mm)
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- *2 This is the distance within which the table can move when it returns to origin.
Make sure that workpieces mounted on the table do not interfere with other workpieces or the facilities around the table.
- *3 The Z-phase first detecting position from the stroke end of the motor side

* For strokes of 99 mm or less, only 1 auto switch mounting bracket can be installed on the motor side.

Dimensions: Motor Parallel

LEFS32R

- *1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more. (Recommended height: 5 mm)
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- *2 The Z-phase first detecting position from the stroke end of the motor side
Please contact SMC for adjusting the Z-phase detecting position at the stroke end of the end side.
- *3 When the table spacer is removed

How to Order

① Accuracy

Nil	Basic type
H	High-precision type

② Size

25
32
40

④ Motor type

Symbol	Type	Output [W]	② Size	⑬ Driver type	Compatible drivers
*1 V6	AC servo motor (Absolute encoder)	100	25	M2	LECYM2-V5
V7		200	32	U2	LECYU2-V5
V8		400	40	M2	LECYM2-V7
				U2	LECYU2-V7
				M2	LECYM2-V8
				U2	LECYU2-V8

*1 For motor type V6, the compatible driver part number suffix is V5.

⑤ Lead [mm]

Symbol	LEFS25	LEFS32	LEFS40
H	20	24	30
A	12	16	20
B	6	8	10

③ Motor mounting position

Nil	In-line
R	Right side parallel
L	Left side parallel

⑥ Stroke [mm]

50	50
to	to
1200	1200

⑦ Motor option

Nil	Without option
B	With lock

⑨ Grease application (Seal band part)

Nil	With
N	Without (Roller specification)

⑩ Positioning pin hole

Nil	Housing B bottom*1	
K	Body bottom 2 locations	

*1 Refer to the body mounting example on page 280 for the mounting method.

⑧ Auto switch compatibility

Nil	None
C	With (Includes 1 mounting bracket)

* If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 275.)

* Order auto switches separately. (For details, refer to pages 276 to 278.)

* When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.

⑫ Actuator cable length [m]

Nil	Without cable
3	3
5	5
A	10
C	20

⑬ Driver type

	Compatible drivers	Power supply voltage [V]
Nil	Without driver	—
M2	LECYM2-V□	200 to 230
U2	LECYU2-V□	200 to 230

* When a driver type is selected, a cable is included. Select the cable type and cable length.

⑪ Cable type

Nil	Without cable
S	Standard cable
R	Robotic cable

⑭ I/O cable length [m]*1

Nil	Without cable
H	Without cable (Connector only)
1	1.5

*1 When "Nil: Without driver" is selected for the driver type, only "Nil: Without cable" can be selected. Refer to page 1135 if an I/O cable is required. (Options are shown on page 1135.)

Applicable Stroke Table

- *1 Please contact SMC for non-standard strokes as they are produced as special orders.
- *2 For details, refer to the "Speed-Work Load Graph (Guide)" on page 130.
- *3 The allowable speed changes according to the stroke.
- *4 A reference value for correcting errors in reciprocal operation
- *5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a

- perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)
- *6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.
If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.
- *7 Indicates the max. power during operation (including the driver)
When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.
- *8 Only when motor option "With lock" is selected

Dimensions: In-line Motor

LEFS25

- *1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height: 5 mm)
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- *2 This is the distance within which the table can move when it returns to origin.
Make sure that workpieces mounted on the table do not interfere with other workpieces or the facilities around the table.
- *3 The Z-phase first detecting position from the stroke end of the motor side

- *1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height: 5 mm)
In addition, be aware that surfaces other than the body mounting reference plane (B dimension range) may slightly protrude from the body mounting reference plane. Be sure to provide a clearance of 1 mm or more to avoid interference with workpieces, facilities, etc.
- *2 This is the distance within which the table can move when it returns to origin.
Make sure that workpieces mounted on the table do not interfere with other workpieces or the facilities around the table.
- *3 The Z-phase first detecting position from the stroke end of the motor side

Support Guide for Ball Screw Drive Actuator

LEFG Series LEFG16, 25, 32, 40

RoHS

Clean Room Specification ▶ p. 961

The support guide was designed to support workpieces with significant overhang.

- As the dimensions are the same as the LEF series body, installation is simple and contributes to a reduction in installation and assembly labor.
- The standard-equipped seal bands prevent grease from splashing and external foreign matter from entering.

Communication plug connector, I/O cable*9

Symbol	Type	Applicable interface
Nil	Without accessory	—
S	Straight type communication plug connector	DeviceNet®
T	T-branch type communication plug connector	CC-Link Ver. 1.10
1	I/O cable (1.5 m)	Parallel input (NPN) Parallel input (PNP)
3	I/O cable (3 m)	
5	I/O cable (5 m)	

- *1 Please contact SMC for non-standard strokes as they are produced as special orders.
- *2 Excludes the LEF16
- *3 If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 275.)
- *4 Order auto switches separately. (For details, refer to pages 276 to 278.)
- *5 When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.

- *6 Refer to the body mounting example on page 280 for the mounting method.
- *7 Produced upon receipt of order
- *8 The DIN rail is not included. It must be ordered separately.
- *9 Select "Nil" for anything other than DeviceNet®, CC-Link, or parallel input. Select "Nil," "S," or "T" for DeviceNet® or CC-Link. Select "Nil," "1," "3," or "5" for parallel input.

⚠ Caution

[CE/UKCA-compliant products]

EMC compliance was tested by combining the electric actuator LEF series and the controller JXC series.

The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.

[Precautions relating to differences in controller versions]

When the JXC series is to be used in combination with the battery-less absolute encoder, use a controller that is version V3.4 or S3.4 or higher. For details, refer to pages 1077 and 1078.

[UL certification]

The JXC series controllers used in combination with electric actuators are UL certified.

The actuator and controller are sold as a package.

Confirm that the combination of the controller and actuator is correct.

<Check the following before use.>

- ① Check the actuator label for the model number. This number should match that of the controller.
- ② Check that the Parallel I/O configuration matches (NPN or PNP).

* Refer to the Operation Manual for using the products. Please download it via our website: <https://www.smcworld.com>

Rated voltage [V]	24 VDC ±10%				

*1 Please contact SMC for non-standard strokes as they are produced as special orders.

*2 Speed changes according to the controller/driver type and work load. Check the "Speed-Work Load Graph (Guide)" on page 108. Furthermore, if the cable length exceeds 5 m, then it will decrease by up to 10% for each 5 m. Cannot be used for vertical applications

*3 A reference value for correcting errors in reciprocal operation

*4 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

*5 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.

If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.

*6 Indicates the max. power during operation (including the controller). This value can be used for the selection of the power supply.

*7 With lock only

*8 For an actuator with lock, add the power for the lock.

12 Controller/Driver mounting

Nil	Screw mounting
D	DIN rail*14

- *1 Please contact SMC for non-standard strokes as they are produced as special orders.
- *2 Excluding the LEF16
- *3 If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 275.)
- *4 Order auto switches separately. (For details, refer to pages 276 to 278.)
- *5 When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.
- *6 Refer to the body mounting example on page 280 for the mounting method.
- *7 Produced upon receipt of order (Robotic cable only)
- *8 The standard cable should only be used on fixed parts.
For use on moving parts, select the robotic cable.
Refer to the [Web Catalog](#) if only the actuator cable is required.

- *9 For details on controllers/drivers and compatible motors, refer to the compatible controllers/drivers on the next page.
- *10 Only available for the motor type "Step motor"
- *11 When pulse signals are open collector, order the current limiting resistor (LEC-PA-R-□) on page 1062 separately.
- *12 When "Without controllers/drivers" is selected for controller/driver types, I/O cable cannot be selected. If an I/O cable is required, refer to the cable for the LECA6 ([Web Catalog](#)), LECP1 ([Web Catalog](#)), or LECPA ([Web Catalog](#)).
- *13 When "Pulse input type" is selected for controller/driver types, pulse input usable only with differential. Only 1.5 m cables usable with open collector
- *14 The DIN rail is not included. It must be ordered separately.
- *15 Select "Nil" for anything other than DeviceNet®, CC-Link, or parallel input. Select "Nil," "S," or "T" for DeviceNet® or CC-Link. Select "Nil," "1," "3," or "5" for parallel input.

⚠ Caution

[CE/UKCA-compliant products]

- ① EMC compliance was tested by combining the electric actuator LEF series and the controller LEC/JXC series.
The EMC depends on the configuration of the customer's control panel and the relationship with other electrical equipment and wiring. Therefore, compliance with the EMC directive cannot be certified for SMC components incorporated into the customer's equipment under actual operating conditions. As a result, it is necessary for the customer to verify compliance with the EMC directive for the machinery and equipment as a whole.
- ② For the incremental (servo motor 24 VDC) specification, EMC compliance was tested by installing a noise filter set (LEC-NFA). Refer to page 1037 for the noise filter set. Refer to the LECA series Operation Manual for installation.

[UL-compliant products (For the LEC series)]

When compliance with UL is required, the electric actuator and controller/driver should be used with a UL1310 Class 2 power supply.

The actuator and controller/driver are sold as a package.

Confirm that the combination of the controller/driver and actuator is correct.

<Check the following before use.>

- ① Check the actuator label for the model number. This number should match that of the controller/driver.
- ② Check that the Parallel I/O configuration matches (NPN or PNP).

* Refer to the Operation Manual for using the products. Please download it via our website: <https://www.smcworld.com>

Slider Type Belt Drive

LEFB Series LEFB25, 32, 40

LECY □ Series ▶ p. 254 Motorless Type ▶ p. 1177

* For details, refer to page 1343 and onward.

How to Order

1 Size

25
32
40

2 Motor mounting position

Nil	Top mounting
U	Bottom mounting

4 Equivalent lead

S	54 mm
---	-------

5 Stroke

300 to 3000	300 mm to 3000 mm
-------------	-------------------

* For details, refer to the applicable stroke table below.

6 Motor option

Nil	Without option
B	With lock

3 Motor type

Symbol	Type	Output [W]	1 Size	1 Driver type	Compatible drivers
*1 S2	AC servo motor (Incremental encoder)	100	25	A1/A2	LECSA□-S1
S3		200	32	A1/A2	LECSA□-S3
S4		400	40	A2	LECSA2-S4
*2 T6	AC servo motor (Absolute encoder)	100	25	B2	LECSB2-T5
T7				C2	LECSC2-T5
				S2	LECSS2-T5
		400	40	B2	LECSB2-T7
C2				LECSC2-T7	
S2				LECSS2-T7	
T8	B2	LECSB2-T8			
C2	LECSC2-T8				
S2	LECSS2-T8				

*1 For motor type S2, the compatible driver part number suffix is S1.

*2 For motor type T6, the compatible driver part number is LECS□2-T5.

7 Auto switch compatibility

Nil	None
C	With (Includes 1 mounting bracket)

* If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 275.)

* Order auto switches separately. (For details, refer to pages 276 to 278.)

* When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.

8 Positioning pin hole

Nil	Housing B bottom*1	
K	Body bottom 2 locations	

*1 Refer to the body mounting example on page 280 for the mounting method.

10 Cable length [m]

Nil	Without cable
2	2
5	5
A	10

* The length of the motor, encoder, and lock cables are the same.

11 Driver type

	Compatible drivers	Power supply voltage	Size		
			25	32	40
Nil	Without driver	—	●	●	●
A1	LECSA1-S□	100 to 120	●	●	—
A2	LECSA2-S□	200 to 230	●	●	●
B2	LECSB2-T□	200 to 240	●	●	●
C2	LECS2-T□	200 to 230	●	●	●
S2	LECSS2-T□	200 to 240	●	●	●

* When a driver type is selected, a cable is included. Select the cable type and cable length. Example) S2S2: Standard cable (2 m) + Driver (LECSS2) S2: Standard cable (2 m) Nil: Without cable and driver

12 I/O cable length [m]*1

Nil	Without cable
H	Without cable (Connector only)
1	1.5

*1 When "Nil: Without driver" is selected for the driver type, only "Nil: Without cable" can be selected. Refer to page 1124 if an I/O cable is required. (Options are shown on page 1124.)

9 Cable type*1 *2

Nil	Without cable
S	Standard cable
R	Robotic cable

*1 A motor cable and encoder cable are included with the product. (A lock cable is also included if motor option "B: With lock" is selected.)

*2 Standard cable entry direction is "(A) Axis side." (Refer to page 1123 for details.)

Applicable Stroke Table

●: Standard/○: Produced upon receipt of order

	Holding force [N]	27	54	110	
	Power [W] at 20°C	6.3	7.9	7.9	
	Rated voltage [V]	24 ⁰ _{-10%}			

*1 Please contact SMC for non-standard strokes as they are produced as special orders.

*2 For details, refer to the "Speed-Work Load Graph (Guide)" on page 132.

*3 Maximum acceleration/deceleration changes according to the work load. Check the "Work Load-Acceleration/Deceleration Graph" of the catalog.

*4 A reference value for correcting errors in reciprocal operation

*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

*6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.

If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.

*7 Indicates the max. power during operation (including the driver)

When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.

*8 Only when motor option "With lock" is selected

*9 For motor type T6, T7, and T8, the resolution will change depending on the driver type.

How to Order

1 Size

25
32
40

2 Motor mounting position

Nil	Top mounting
U	Bottom mounting

3 Motor type

Symbol	Type	Output [W]	1 Size	1 Driver type	Compatible drivers
*1 V6	AC servo motor (Absolute encoder)	100	25	M2	LECYM2-V5
V7		200	32	U2	LECYU2-V5
V8		400	40	M2	LECYM2-V7
				U2	LECYU2-V7
				M2	LECYM2-V8
				U2	LECYU2-V8

4 Equivalent lead [mm]

S	54
---	----

5 Stroke [mm]

300	300
to	to
3000	3000

6 Motor option

Nil	Without option
B	With lock

*1 For motor type V6, the compatible driver part number suffix is V5.

7 Auto switch compatibility

Nil	None
C	With (Includes 1 mounting bracket)

- * If 2 or more are required, please order them separately. (Part no.: LEF-D-2-1 For details, refer to page 275.)
- * Order auto switches separately. (For details, refer to pages 276 to 278.)
- * When "Nil" is selected, the product will not come with a built-in magnet for an auto switch, and so a mounting bracket cannot be secured. Be sure to select an appropriate model initially as the product cannot be changed to have auto switch compatibility after purchase.

8 Positioning pin hole

Nil	Housing B bottom*1	
K	Body bottom 2 locations	

*1 Refer to the body mounting example on page 280 for the mounting method.

9 Cable type

Nil	Without cable
S	Standard cable
R	Robotic cable

12 I/O cable length [m]*1

Nil	Without cable
H	Without cable (Connector only)
1	1.5

*1 When "Nil: Without driver" is selected for the driver type, only "Nil: Without cable" can be selected. Refer to page 1135 if an I/O cable is required. (Options are shown on page 1135.)

10 Actuator cable length [m]

Nil	Without cable
3	3
5	5
A	10
C	20

11 Driver type

	Compatible drivers	Power supply voltage [V]
Nil	Without driver	—
M2	LECYM2-V□	200 to 230
U2	LECYU2-V□	200 to 230

* When a driver type is selected, a cable is included. Select the cable type and cable length.

*1 Please contact SMC for non-standard strokes as they are produced as special orders.

*2 For details, refer to the "Speed-Work Load Graph (Guide)" on page 132.

*3 Maximum acceleration/deceleration changes according to the work load. Check the "Work Load-Acceleration/Deceleration Graph (Guide)" of the catalog.

*4 A reference value for correcting errors in reciprocal operation

*5 Impact resistance: No malfunction occurred when the actuator was tested with a drop tester in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

Vibration resistance: No malfunction occurred in a test ranging between 45 to 2000 Hz. The test was performed in both an axial direction and a perpendicular direction to the lead screw. (The test was performed with the actuator in the initial state.)

*6 The static allowable moment is the amount of static moment which can be applied to the actuator when it is stopped.

If the product is exposed to impact or repeated load, be sure to take adequate safety measures when using the product.

*7 Indicates the max. power during operation (including the driver)

When selecting the power supply capacity, refer to the power supply capacity in the operation manual of each driver.

*8 Only when motor option "With lock" is selected

Construction

LEFB25V6S

* Motor bottom mounting type is the same.

Component Parts

No.	Description	Material	Note
1	Body	Aluminum alloy	Anodized
2	Rail guide		
3	Belt		
4	Belt holder	Carbon steel	Chromating
5	Belt stopper	Aluminum alloy	
6	Table	Aluminum alloy	Anodized
7	Blanking plate	Aluminum alloy	Anodized
8	Seal band holder	Synthetic resin	
9	Housing A	Aluminum die-cast	Coating
10	Pulley holder	Aluminum alloy	
11	Pulley shaft	Stainless steel	
12	End pulley	Aluminum alloy	Anodized
13	Motor pulley	Aluminum alloy	Anodized
14	Return flange	Aluminum alloy	Coating
15	Housing	Aluminum alloy	Coating
16	Motor mount	Aluminum alloy	Coating
17	Motor cover	Aluminum alloy	Anodized
18	Motor end cover	Aluminum alloy	Anodized

No.	Description	Material	Note
19	Band stopper	Stainless steel	
20	Motor		
21	Rubber bushing	NBR	
22	Stopper	Aluminum alloy	
23	Dust seal band	Stainless steel	
24	Bearing		
25	Bearing		
26	Spacer	Aluminum alloy	
27	Tension adjustment cap screw	Chromium molybdenum steel	Chromating
28	Pulley retaining screw	Chromium molybdenum steel	Chromating
29	Magnet	—	With auto switch compatibility
30	Roller assembly	—	

Replacement Parts/Grease Pack

Applied portion	Order no.
Rail guide	GR-S-010 (10 g)
Dust seal band (Back side)	GR-S-020 (20 g)

Dimensions: Belt Drive

LEFB25/Motor top mounting type

- *1 When mounting the actuator using the body mounting reference plane, set the height of the opposite surface or pin to be 3 mm or more because of round chamfering. (Recommended height: 5 mm)
- *2 This is the distance within which the table can move when it returns to origin. Make sure that workpieces mounted on the table do not interfere with other workpieces or the facilities around the table.
- *3 The Z-phase first detecting position from the stroke end of the motor side

Motor option: With lock

Support Guide for Belt Drive Actuator

LEFG Series LEFG16, 25, 32, 40

RoHS

Application example

The support guide was designed to support workpieces with significant overhang.

- As the dimensions are the same as the LEF series body, installation is simple and contributes to a reduction in installation and assembly labor.
- The standard-equipped seal bands prevent grease from splashing and external foreign matter from entering.

How to Order

LEFG **32** - **BT** - **300** **N**

LEF□/□E/□F Series Auto Switch Mounting

Auto Switch Mounting Position

Model	Size	A	B	Operating range
LEFS LEFB	25	45	51	4.9
	32	55	61	3.9
	40	79	85	5.3

- * The applicable auto switch is D-M9 (N/P/B) (W) (M/L/Z).
- * The operating range is a guideline including hysteresis, not meant to be guaranteed. There may be large variations depending on the ambient environment.
- * Adjust the auto switch after confirming the operating conditions in the actual setting.

Auto Switch Mounting

Rotate the bolts for auto switch mounting bracket three to four times to loosen them (Removing them is not required), and slide and remove the auto switch mounting bracket. Then, insert a switch into the groove on the mounting bracket.

As the mounting bolts for installing the product body interfere with the auto switch mounting bracket, mount the auto switch mounting bracket after installing the product body. After installing product body, tighten the bolts for the auto switch mounting bracket.

- * The applicable auto switch is D-M9 (N/P/B) (W) (M/L/Z).
- * The direction of the lead wire entry is specified. If it is mounted in the opposite direction, the auto switch may malfunction.
- * Tighten the auto switch mounting screws (provided together with the auto switch), using a precision screwdriver with a handle diameter of approximately 5 to 6 mm.
- * If more than two auto switch mounting brackets are required, please order them separately. All eight bolts for attaching the auto switch mounting bracket at the stroke end are tightened into the body when the product is shipped.
For 50-mm stroke type, only four bolts are tightened on the motor side.

Solid State Auto Switch Direct Mounting Type D-M9N/D-M9P/D-M9B

Refer to the SMC website for details on products that are compliant with international standards.

Grommet

- 2-wire load current is reduced (2.5 to 40 mA).
- Using flexible cable as standard spec.

Caution

Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

D-M9□E

D-M9□EV

2-Color Indicator Solid State Auto Switch Direct Mounting Type D-M9NW/D-M9PW/D-M9BW

Refer to the SMC website for details on products that are compliant with international standards.

PLC: Programmable Logic Controller

Grommet

- 2-wire load current is reduced (2.5 to 40 mA).
- Using flexible cable as standard spec.
- The proper operating range can be determined by the color of the light. (Red → Green ← Red)

Caution

Precautions

Fix the auto switch with the existing screw installed on the auto switch body. The auto switch may be damaged if a screw other than the one supplied is used.

Auto Switch Specifications

D-M9□W (With indicator light)			
Auto switch model	D-M9NW	D-M9PW	D-M9BW
Electrical entry direction	In-line		
Wiring type	3-wire		2-wire
Output type	NPN	PNP	—
Applicable load	IC circuit, Relay, PLC		24 VDC relay, PLC
Power supply voltage	5, 12, 24 VDC (4.5 to 28 V)		—
Current consumption	10 mA or less		
Load voltage	28 VDC or less	—	24 VDC (10 to 28 VDC)
Load current	40 mA or less		2.5 to 40 mA
Internal voltage drop	0.8 V or less at 10 mA (2 V or less at 40 mA)		4 V or less
Leakage current	100 μA or less at 24 VDC		0.8 mA or less
Indicator light	Operating range Red LED illuminates. Proper operating range Green LED illuminates.		
Standard	CE/UKCA marking		

Oilproof Flexible Heavy-duty Lead Wire Specifications

Auto switch model		D-M9NW	D-M9PW	D-M9BW
Sheath	Outside diameter [mm]	ø2.6		
Insulator	Number of cores	3 cores (Brown/Blue/Black)		2 cores (Brown/Blue)
	Outside diameter [mm]	ø0.88		
Conductor	Effective area [mm ²]	0.15		
	Strand diameter [mm]	ø0.05		
Min. bending radius [mm] (Reference values)		17		

- * Refer to page 1363 for solid state auto switch common specifications.
- * Refer to page 1363 for lead wire lengths.

Weight

[g]

Auto switch model		D-M9NW	D-M9PW	D-M9BW
Lead wire length	0.5 m (Nil)	8	7	7
	1 m (M)	14	13	13
	3 m (L)	41	38	38
	5 m (Z)	68	63	63

Dimensions

[mm]

D-M9□W

LEF Series Specific Product Precautions 1

Be sure to read this before handling the products. Refer to page 1351 for safety instructions, pages 1352 to 1357 for electric actuator precautions, and pages 1358 to 1367 for auto switch precautions.

Design

⚠ Caution

- 1. Do not apply a load in excess of the specification limits.**
Select a suitable actuator by work load and allowable moment. If a load in excess of the specification limits is applied to the guide, adverse effects such as the generation of play in the guide, reduced accuracy, or reduced service life of the product may occur.
- 2. Do not use the product in applications where excessive external force or impact force is applied to it.**
This can cause a malfunction.

Selection

⚠ Warning

- 1. Do not increase the speed in excess of the specification limits.**
Select a suitable actuator by the relationship between the allowable work load and speed, and the allowable speed of each stroke. If the product is used outside of the specification limits, adverse effects such as the generation of noise, reduced accuracy, or reduced service life of the product may occur.
- 2. Do not use the product in applications where excessive external force or impact force is applied to it.**
This can cause a malfunction.
- 3. When the product repeatedly cycles with partial strokes (see the table below), operate it at a full stroke at least once every few dozen cycles.**
Failure to do so may result in the product running out of lubrication.

Model	Partial stroke
LEF□16	40 mm or less
LEF□25	65 mm or less
LEF□32	70 mm or less
LEF□40	105 mm or less

- 4. When external force is to be applied to the table, it is necessary to add the external force to the work load as the total carried load when selecting a size.**
When a cable duct or flexible moving tube is attached to the actuator, the sliding resistance of the table will increase, which may lead to the malfunction of the product.
- 5. When the stroke exceeds 2000 mm, a joint needs to be added to the guide rail for extension. When passing over the joint, slight vibration may occur.**

Size	Stroke	A
32	2500	370
	3000	820
40	2500	320
	3000	820

Handling

⚠ Caution

- 1. Set the [In position] in the step data to at least 0.5 (at least 1 for the belt type).**
If it is set any lower, the completion signal of the [In position] may not be properly output.

Handling

⚠ Caution

- 2. INP output signal**
 - 1) Positioning operation**
When the product comes within the set range of the step data [In position], the INP output signal will turn ON.
Initial value: Set to [0.50] or higher.
- 3. Never allow the table to collide with the stroke end except during return to origin.**
When incorrect instructions are inputted, such as those which cause the product to operate outside of the specification limits or outside of the actual stroke through changes in the controller/driver settings and/or origin position, the table may collide with the stroke end of the actuator. Be sure to check these points before use.
If the table collides with the stroke end of the actuator, the guide, belt, or internal stopper may break. This can result in abnormal operation.

- Handle the actuator with care when it is used in the vertical direction as the workpiece will fall freely from its own weight.
- 4. The moving force should be the initial value.**
If the moving force is set below the initial value, it may cause the generation of an alarm.
 - 5. The actual speed of this actuator is affected by the work load and stroke.**
Check the model selection section of the catalog.
 - 6. Do not apply a load, impact, or resistance in addition to the transferred load during return to origin.**
Additional force will cause the displacement of the origin position since it is based on the detected motor torque.
 - 7. Do not dent, scratch, or cause other damage to the body or table mounting surfaces.**
Doing so may cause unevenness in the mounting surface, play in the guide, or an increase in the sliding resistance.
 - 8. Do not apply strong impact or an excessive moment while mounting a workpiece.**
If an external force over the allowable moment is applied, it may cause play in the guide or an increase in the sliding resistance.
 - 9. Keep the flatness of the mounting surface within 0.1 mm/500 mm.**
If a workpiece or base does not sit evenly on the body of the product, play in the guide or an increase in the sliding resistance may occur.
 - 10. When mounting the product, secure a bending diameter of 40 mm or longer for the cable.**
 - 11. Do not allow a workpiece to collide with the table during the positioning operation or within the positioning range.**
 - 12. For the model where grease is applied to the dust seal band for sliding, when wiping off the grease to remove foreign matter, etc., be sure to reapply grease afterward.**
 - 13. When bottom mounted, the dust seal band may become warped.**

LEF Series Specific Product Precautions 2

Be sure to read this before handling the products. Refer to page 1351 for safety instructions, pages 1352 to 1357 for electric actuator precautions, and pages 1358 to 1367 for auto switch precautions.

Handling

Caution

14. When mounting the product, use screws of adequate length and tighten them with adequate torque.

Tightening the screws with a higher torque than recommended may result in a malfunction and/or decrease in guide accuracy, while tightening with a lower torque can result in the displacement of the mounting position or, in extreme conditions, the actuator could become detached from its mounting position.

Body fixed

Model	Screw size	Max. tightening torque [N·m]	ϕA [mm]	L [mm]
LEF□16	M3	0.6	3.5	20
LEF□25	M4	1.5	4.5	24
LEF□32	M5	3.0	5.5	30
LEF□40	M6	5.2	6.6	31

Body mounting

For housing B bottom

The traveling parallelism is the reference plane for the body mounting reference plane. If the traveling parallelism for a table is required, set the reference plane against parallel pins, etc.

For body bottom

Workpiece fixed

Model	Screw size	Max. tightening torque [N·m]	L (Max. screw-in depth) [mm]
LEF□16	M4 x 0.7	1.5	6
LEF□25	M5 x 0.8	3.0	8
LEF□32	M6 x 1	5.2	9
LEFS40	M8 x 1.25	12.5	13

To prevent the workpiece retaining screws from touching the body, use screws that are 0.5 mm or shorter than the maximum screw-in depth. If long screws are used, they may touch the body and cause a malfunction.

15. Do not operate by fixing the table and moving the actuator body.

16. The belt drive actuator cannot be used for vertical applications.

17. Check the specifications for the minimum speed of each actuator.

Failure to do so may result in unexpected malfunctions such as knocking.

18. In the case of the belt drive actuator, vibration may occur during operation at speeds within the actuator specifications due to the operating conditions. Change the speed setting to a speed that does not cause vibration.

19. When fluctuations in the load are caused during operation, malfunction, noise, or alarm generation may occur. (In the case of the AC servo motor)

The gain tuning may not be suitable for fluctuating loads. Adjust the gain properly by following the instructions in the driver manual.

Maintenance

Warning

Maintenance frequency

Perform maintenance according to the table below.

Frequency	Appearance check	Internal check	Belt check
Inspection before daily operation	○	—	—
Inspection every 6 months/1000 km/5 million cycles*1	○	○	○

*1 Select whichever comes first.

• Items for visual appearance check

1. Loose set screws, Abnormal amount of dirt, etc.
2. Check for visible damage, Check of cable joint
3. Vibration, Noise

• Items for internal check

1. Lubricant condition on moving parts
2. Loose or mechanical play in fixed parts or fixing screws

• Items for belt check

Stop operation immediately and replace the belt when any of the following occur. In addition, ensure your operating environment and conditions satisfy the requirements specified for the product.

a. Tooth shape canvas is worn out

Canvas fiber becomes fuzzy, Rubber is coming off and the fiber has become whitish, Lines of fibers have become unclear

b. Peeling off or wearing of the side of the belt

Belt corner has become rounded and frayed threads stick out

c. Belt is partially cut

Belt is partially cut, Foreign matter caught in the teeth of other parts is causing damage

d. A vertical line on belt teeth is visible

Damage which is made when the belt runs on the flange

e. Rubber back of the belt is softened and sticky

f. Cracks on the back of the belt are visible

LEF Series

Battery-less Absolute Encoder Type Specific Product Precautions

Be sure to read this before handling the products. Refer to page 1351 for safety instructions and pages 1352 to 1357 for electric actuator precautions.

Handling

Caution

1. Absolute encoder ID mismatch error at the first connection

In the following cases, an "ID mismatch error" alarm occurs after the power is turned ON. Perform a return to origin operation after resetting the alarm before use.

- When an electric actuator is connected and the power is turned ON for the first time after purchase*1
- When the actuator or motor is replaced
- When the controller is replaced

*1 If you have purchased an electric actuator and controller with the set part number, the pairing may have already been completed and the alarm may not be generated.

"ID mismatch error"

Operation is enabled by matching the encoder ID on the electric actuator side with the ID registered in the controller. This alarm occurs when the encoder ID is different from the registered contents of the controller. By resetting this alarm, the encoder ID is registered (paired) to the controller again.

When a controller is changed after pairing is completed				
	Encoder ID no. (* Numbers below are examples.)			
Actuator	17623	17623	17623	17623
Controller	17623	17699	17699	17623
ID mismatch error occurred?	No	Yes	Error reset ⇒ No	

The ID number is automatically checked when the control power supply is turned ON. An error is output if the ID number does not match.

2. In environments where strong magnetic fields are present, use may be limited.

A magnetic sensor is used in the encoder. Therefore, if the actuator motor is used in an environment where strong magnetic fields are present, malfunction or failure may occur. Do not expose the actuator motor to magnetic fields with a magnetic flux density of 1 mT or more.

When installing an electric actuator and an air cylinder with an auto switch (ex. CDQ2 series) or multiple electric actuators side by side, maintain a space of 40 mm or more around the motor. Refer to the construction drawing of the actuator motor.

An air cylinder with an auto switch cannot be installed in the shaded area.

• When lining up actuators

SMC actuators can be used with their motors adjacent to each other. However, maintain a space of 40 mm or more between the motors and the position where the magnet passes.

The magnet is in the middle of the table.

○ Can be used with their motors adjacent to each other

✗ Do not allow the motors to be in close proximity to the position where the magnet passes.

3. The connector size of the motor cable is different from that of the electric actuator with an incremental encoder.

The motor cable connector of an electric actuator with a battery-less absolute encoder is different from that of an electric actuator with an incremental encoder. As the connector cover dimensions are different, take the dimensions below into consideration during the design process.

Battery-less absolute encoder connector cover dimensions
