Clean Design Manifold Valve

JSY5000-H Series

Low fluid accumulation
Easy to clean

IP69K

Large flow rate

1,600[*1] **L/min (ANR)**

Enclosure: IP69K

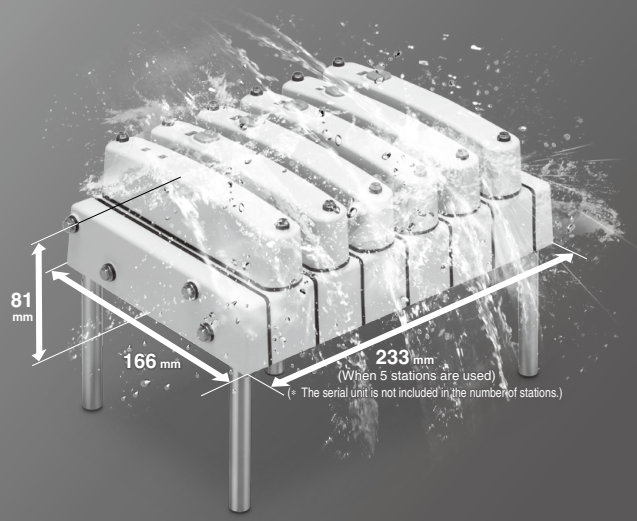
NSF-H1 grease

External parts: FDA-compliant materials[*2]

Metal parts are made of stainless steel 316 with high anti-corrosion performance.

Wiring: Lead wire/
Fieldbus type
IO-Link

*1 When the inlet side is 0.6 MPa, and the outlet side is 0.5 MPa (20°C)
*2 The lead wire type cable is not made of FDA-compliant materials.

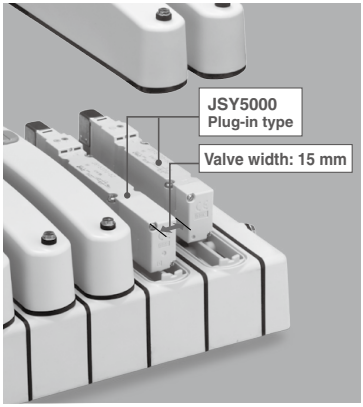


The photo shows the IO-Link compatible manifold.

Crevice free exterior and can be cleaned without disassembly

Cleanable space between valves

Valve width is 15 mm.



Sub-plate (Single unit)

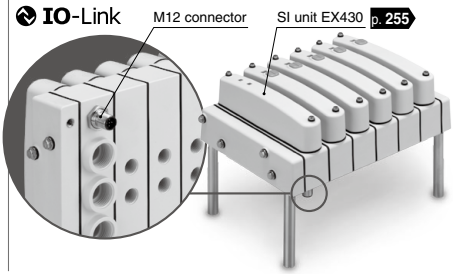
IP69K compliant

Wiring

■Manifold valve

Lead wire type

Fieldbus type



■Sub-plate (Single unit)

M12 connector cable

IO-Link compatible

Integratable with various existing networks

IO-Link devices can be easily connected to various networks via the IO-Link master, which acts as a gateway between IO-Link communication and various Fieldbusses. Solenoid valves can be connected for communication without relying upon a Fieldbus or PLC.

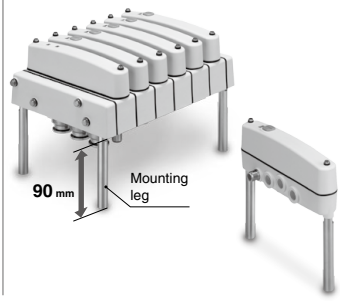
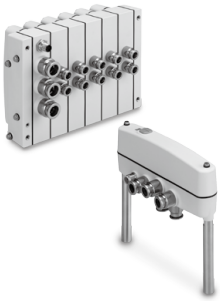
Manifold Parts

Mounting leg



With One-touch fittings

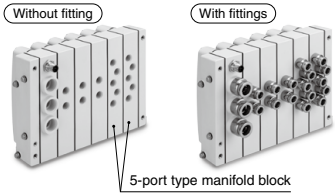


5-port type

Manifold block assembly p. 250

When the same manifold is used for different pressures, a manifold block assembly is used as a supply port for different pressures. It is also used for independent exhaust.

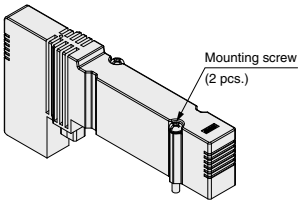
* Use with blocking disks.



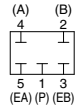
Manifold Options

■ Blanking plate [With two mounting screws] p. 257

Used when valve additions are expected or for maintenance



JSY51M-26P-1A



Circuit diagram

■ SUP/EXH blocking disk p. 257

[SUP blocking disk]

By inserting the SUP blocking disk in the pressure supply passage of the manifold valve, can provide two different high and low pressure in one manifold.

[EXH blocking disk]

By inserting the EXH blocking disk in the exhaust passage of the manifold valve, can separate the exhaust from the valve so it does not affect the other valves. It can also be used for the manifold for the positive pressure and vacuum mixed manifold. (2 pieces are required to block EA/EB both sides of the EXH.)

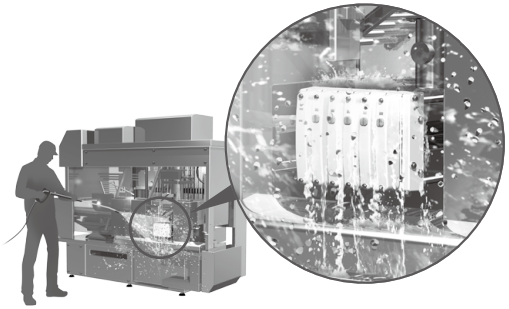
IP69K manifold

IP69K products are IP6X (IEC/EN 60529) and IPX9K (ISO 20653) compliant and protected against dust and high-pressure hot water.

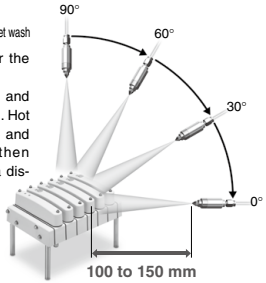


Glossary of Terms

IP6X: Dust-tight

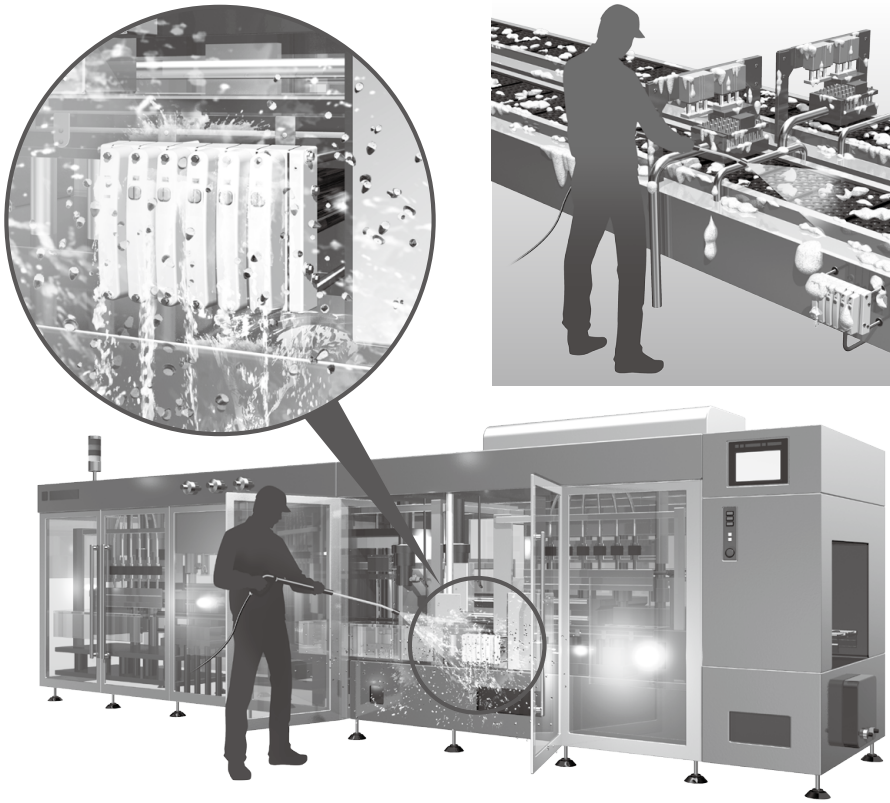
IPX9K: High-pressure and temperature jet wash

Not adversely affected under the following conditions.
Sample placed on a turntable and rotated at a speed of 5 ±1 rpm. Hot pressurized water at 80 ±5°C and pressure 8 to 10 MPa is then sprayed onto the sample at a distance of 100 to 150 mm with a jetwash nozzle from four position: 0°, 30°, 60°, and 90°, for 30 s for each position. Flow rate: 15 ±1 L/min



Applications

Installed inside equipment



Installed near actuators

EHEDG Compliant Fittings

EHEDG Compliant | IP69K | Hygienic Design | US FDA Compliant

KFG2H□-E Series

∗ This product is not assembled when shipped.

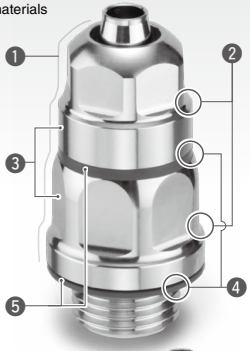
EHEDG Certification

This series satisfies EHEDG guidelines (hygienic design standards), preventing liquid and foreign matter from entering, and is easy to wash.

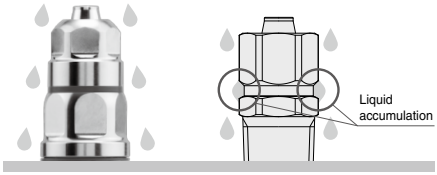
EHEDG design standards

1. External surface roughness: Ra 0.8 µm or less
2. Corners of radius 3 mm or more or with an internal angle of 135°
3. Stainless material with high anti-corrosion performance: Stainless steel 316
4. No direct contact of external metal parts
5. Gasket seals made of US FDA-compliant rubber materials

EHEDG Certificate of Compliance



Design for less residual liquid accumulation



EHEDG compliant fitting
Design for better liquid flow and less residual liquid accumulation

Existing KFG2 model
Design for poor liquid flow and more residual liquid accumulation

Achieved IP69K rating

Rubber parts

The material used is a special FKM that is compliant with the FDA (U.S. Food and Drug Administration) §177.2600 dissolution test. They are colored in blue for superior visibility.

Body type: Male connector

Connection thread: M, G[*1]

∗1 ISO 16030 compliant

		4-position dual 3-port valve	3
		3-position	3
Manual override			Non-locking push type
Pilot exhaust type	**Internal pilot**		Common exhaust
	External pilot (Made to order)		
Lubrication			Not required
Mounting orientation∗2			Unrestricted
Impact/Vibration resistance∗2 **m/s²**			150/30
Coil rated voltage DC			24 V
Allowable voltage fluctuation V			±10% of the rated voltage
Power consumption W	**Standard**		0.4
	With power-saving circuit		0.1∗3 [Inrush 0.4, Holding 0.1]
Surge voltage suppressor			Diode (Varistor for non-polar type)
Indicator light			LED

∗1 The product is IPX9K compliant (protected against high-pressure hot water). However, operation of the valve must be within the specified valve ambient temperature and fluid temperature range.

∗2 Impact resistance: The value at which no malfunction occurs when tested in the axial direction and at right angles to the main valve and the armature in both energized and de-energized states, once for each condition (Values from the initial stage)
Vibration resistance: The value at which no malfunction occurs in a one-sweep test between 45 and 2000 Hz, performed in both energized and de-energized states in the axial direction and at right angles to the main valve and the armature (Values from the initial stage)

∗3 For details, refer to page 260.

Manifold Specifications

Type			Lead wire	Fieldbus (IO-Link)*1
Manifold type			Plug-in connector connecting base	
SUP/EXH port type			Common SUP/EXH	
Valve stations			2 to 16 stations	
Internal wiring			Positive common Negative common (Refer to "Electrical Wiring Specifications" on page 237.)	Negative common
Port size	**SUP/EXH block**	**1(P), 5(EA), 3(EB) port**	G1/2 (Based on ISO 16030)	
	2-port type manifold block	**4(A), 2(B) port**	G1/4 (Based on ISO 16030)	
	5-port type manifold block	**1(P), 4(A), 2(B), 5(EA), 3(EB) port**	G1/4 (Based on ISO 16030)	
Enclosure			IP69K (Based on IEC/EN 60529/ISO 20653)	
External parts material			Resin parts: PA, Metal parts: Stainless steel 316, Rubber parts: EPDM	

*1 Refer to page 255 for the Fieldbus type for output (EX430 series) specifications.

Manifold Flow Rate Characteristics

Manifold block type	Port size		Flow rate characteristics			
	1, 5, 3 (P, EA, EB)	4, 2 (A, B)	1 → 4, 2 (P → A, B)		4, 2 → 5, 3(A, B → EA, EB)	
			C [dm³/(s·bar)]	b	C [dm³/(s·bar)]	b
2-port type	G1/2	G1/4	6.80	0.31	7.64	0.23
5-port type	G1/4		5.60	0.21	5.67	0.22

* The flow rate characteristics values are for an individually operated 2-position type manifold base with 5 stations.

Manifold Weight

Manifold block type (2-port/5-port type)	Weight: g*1 (n: Number of stations)
Lead wire type	227 n + 1070
Fieldbus type	227 n + 500

*1 Weight without fittings. For when a lead wire type cable is 5 m. Add the weight of the valves to be mounted from the table below to find the total weight.

Valve Weight

Valve model	Type of actuation		Weight [g]
JSY5□03-H	2-position	Single	86
		Double	96
	3-position	Closed center	106
		Exhaust center	
		Pressure center	
	4-position	Dual 3-port	92

Response Time

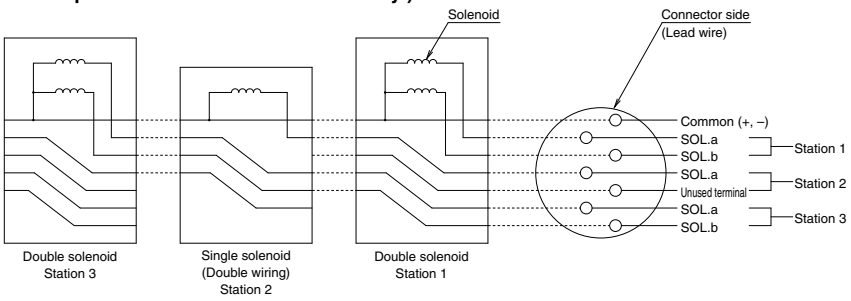
Valve model	Response time [ms]*1	
	Z type	U type
JSY5103-H	40	32
JSY5203-H	19	19
JSY53/4/503-H	46	44
JSY5A/B/C03-H	38*2	29*2

*1 Based on dynamic performance test, JIS B 8419:2010 (Coil temperature: 20°C, at rated voltage)
*2 There will be an approx. 10 ms delay on the 2(B) port side due to the length of the pilot passage.

Connector Wiring Layout

For both Fieldbus and lead wire types, additional valves are sequentially assigned pins on the connector.
This makes it completely unnecessary to disassemble the connector unit.

■Single solenoid valve is installed to all double wiring. (Double wiring specification) (Manifold specification sheet is not necessary.)



* These diagrams are for the purpose of explanation, and differ from the actual connector wiring.

JSY5000-H Series
Valve Replacement Parts: Pilot Valve

How to Order Pilot Valves (With a gasket and two mounting screws)

V112 □ – 5 A

Coil type

Nil	Standard
T	With power-saving circuit

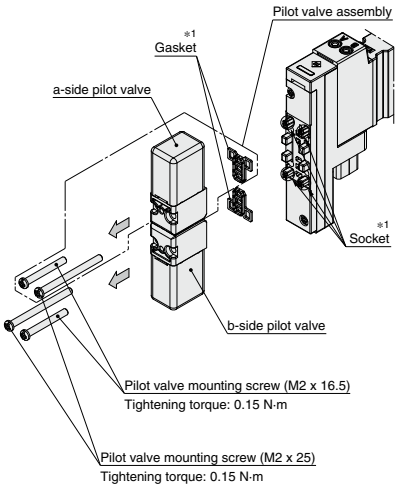
Rated voltage

5	24 VDC

⚠Caution

1. The coil specification and voltage (including light/surge voltage suppressor) cannot be changed by changing the pilot valve.
2. When selecting the standard coil type, it is not possible to change to the power-saving circuit type.

How to replace pilot valves



- Remove the pilot valve mounting screws.
- Remove the pilot valve in the direction indicated by the arrow.

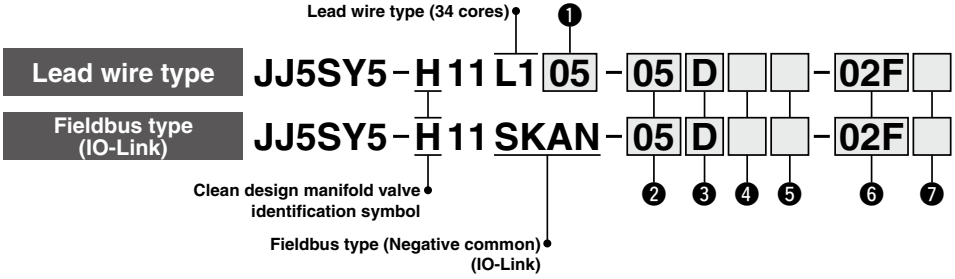
∗1 Ensure the gasket is mounted, and take care not to bend the socket.

∗ Assemble by following the removal procedure in reverse.

Clean Design Manifold Valve
JSY5000-H Series
[IP69K Compliant]

⚠ Caution This is an IP69K compliant product. The manifold and valves are ordered as a set.

How to Order Manifolds



❶ Lead wire length

Symbol	Length
05	5 m
10	10 m
15	15 m

❷ Valve stations

Symbol	Stations	Note
02	2 stations	Double wiring*1
⋮	⋮	
16	16 stations	

*1 Valve stations number includes stations with a blanking plate, and is the total number for all 2-port and 5-port type manifold blocks.

❸ SUP/EXH block 1(P), 5(EA), 3(EB) port entry

D	D side (2 to 10 stations)
B	Both sides (2 to 16 stations)

* SUP/EXH blocks with U side only is not available.

❹ Pilot type

Nil	Internal pilot
R*1	External pilot

*1 External pilot port is on the D side end block.
The external pilot specification should be ordered as made to order.

❺ 5-port type manifold block stations

Symbol	Stations	Note
Nil	None	Specify the number of stations with 5-port type manifold blocks, so this will be equal to or less than the total number of valve stations. **Specify the arrangement and blocking disk mounting position in the manifold specification sheet.**
01	1 station	
⋮	⋮	
16	16 stations	

* E.g.) When the symbol is "02", 2 stations are 5-port type manifold blocks.
When the symbol is Nil or blank, all stations are of 2-port type manifold block.
* When different pressures are required, use 5-port type manifold blocks with blocking disks. Use of 5-port type manifold blocks without blocking disks can be used to provide an intermediate SUP/EXH block function.

❻ Manifold block port size [Thread piping/One-touch fitting (Metric/Inch size)]

Symbol	Fitting specifications		Manifold block port size		Note		
					SUP/EXH block	D side end block	
			2-port type	5-port type			
			A, B port	P, A, B, EA, EB port	P, EA, EB port	X, PE*2 port	VENT port
02F	Without fitting		G1/4 Thread piping		G1/2 Thread piping	G1/8 Thread piping	M5 Thread piping
B8	Metric size Threaded One-touch fitting	Brass fitting	ø8*1		ø16	ø6	ø4*3
B10			ø10				
G8		Stainless steel fitting	ø8*1				
G10			ø10				
BN9	Inch size Threaded One-touch fitting	Brass fitting	ø5/16"*1		ø1/2"	ø1/4"	ø5/32"*3
BN11			ø3/8"				
GN9		Stainless steel fitting	ø5/16"*1				
GN11			ø3/8"				

*1 ø8 and ø5/16" One-touch fitting are common for mm and inch size.
*2 In the case of external pilot type (made to order), fittings are attached to the X and PE ports according to the above fitting type.
*3 For the VENT port ø4 and ø5/32", the same fitting is used.

❼ Mounting option

Nil	None
L*1	Mounting leg (90 mm)

*1 Mounting legs are shipped together with the product.

Made to Order (Refer to page 258 for details.)

Specifications
External pilot

⚠ Caution This is an IP69K compliant product. The manifold and valves are ordered as a set.

How to Order Valves

JSY5 1 03 □ – 5 U – H

❶ ❷ ❸

● **Clean design manifold valve identification symbol**

Made to Order **Made to Order**
(Refer to page 258 for details.)

Specifications
External pilot

❶ Type of actuation

1	2-position	Single
2		Double
3	3-position	Closed center
4		Exhaust center
5		Pressure center
A*1	4-position dual 3-port	N.C./N.C.
B*1		N.O./N.O.
C*1		N.C./N.O.

*1 External pilot specification is not applicable for 4-position dual 3-port valves.

❷ Coil specifications

Nil	Standard
T	With power-saving circuit (Continuous duty type)

* Be careful of the energizing time when the power-saving circuit is selected. For details, refer to page 260.

❸ Light/surge voltage suppressor

Symbol	With light	Surge voltage suppressor	Common specification
U	●	●	Non-polar
Z			Polar Positive common
NZ			Polar Negative common

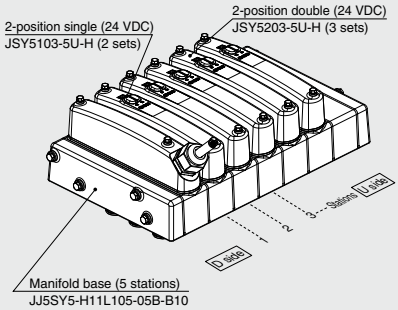
* Only "Z" and "NZ" types are available with a powersaving circuit.
* For fieldbus type manifold, select non-polar (U) or negative common (NZ).

⚠ Caution
- **If the product is to be continuously energized, please be sure to select the power-saving circuit (continuous duty type) specification.**

⚠ Protective class class Ⅲ (Mark: ⧼Ⅲ⧽)

How to Order Manifold Assembly

Example (JJ5SY5-H11L105-□)



⚠ Caution **This is an IP69K compliant product. The manifold and valves are ordered as a set.**

Ordering example

JJ5SY5-H11L105-05B-B10····1 set (Type H11 5-station manifold base part no.)
* **JSY5103-5U-H·····2 sets (2-position single part no.)**
* **JSY5203-5U-H·····3 sets (2-position double part no.)**

→The asterisk denotes the symbol for the assembly.
Prefix it to the part numbers of the valve, etc.

- For the valve arrangement, the valve closest to the D side is considered the 1st station.
- Under the manifold part number, state the valves to be mounted in order starting with the 1st station as shown in the figure above. If the arrangement becomes too complicated, specify the details on a manifold specification sheet.

Manifold Specifications

If the arrangement becomes too complicated, or for arrangements including 5-port type manifold blocks, please use the manifold specification sheet.

JSY5000-H Series
Sub-plate (Single Unit) [IP69K Compliant]

Sub-plate Specifications

Type		Plug-in single unit type with M12 plug connector
SUP/EXH port type		1(P), 5, 3(EA, EB) individual port
Internal wiring		Positive common Negative common (Refer to the pin arrangement on page 243.)
Port size	**1(P), 5/3(EA/EB)**	G1/4 (Based on ISO 16030)
	4(A), 2(B)	
Enclosure		IP69K (Based on IEC/EN 60529/ISO 20653)
External parts material		Resin parts: PA, Metal parts: Stainless steel 316, Rubber parts: EPDM

Sub-plate Flow Rate Characteristics/Weight

Port size		Flow rate characteristics				Weight: g*1
1, 5, 3 (P, EA, EB)	4, 2 (A, B)	1 → 4, 2 (P → A, B)		4, 2 → 5, 3 (A, B → EA, EB)		
		C [dm³/(s·bar)]	b	C [dm³/(s·bar)]	b	
G1/4	G1/4	6.75	0.31	6.53	0.22	180

*1 Weight without fittings, valve, and M12 cable. Valve weight can be added from page 230.

How to Order Sub-plates (With Valve/Valve Cover)

JSY5 1 0 3 ☐ – 5 U – H – WO – U 02F ☐

❶ Body type ● ❷ Pilot valve exhaust method ● ❸ ❹ Clean design sub-plate identification symbol ❺ ❻ ❼

Made to Order
(Refer to page 258 for details.)

Specifications
External pilot

❶ Type of actuation

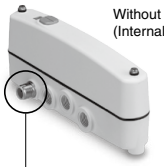
1	2-position	Single
2		Double
3	3-position	Closed center
4		Exhaust center
5		Pressure center
A*1	4-position dual 3-port	N.C./N.C.
B*1		N.O./N.O.
C*1		N.C./N.C.

*1 External pilot specification is not applicable for 4-position dual 3-port valves.

❷ Coil type

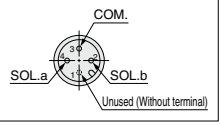
Nil	Standard
T	With power-saving circuit (Continuous duty type)

* Be careful of the energizing time when the power-saving circuit is selected. For details, refer to page 260.



Without fitting (Internal pilot)

Sub-plate side pin arrangement
(No numeric indication)



* Plug connector type

❸ Light/surge voltage suppressor

Symbol	With light	Surge voltage suppressor	Common specification
U	●	●	Non-polar
Z			Polar Positive common
NZ			Polar Negative common

* Only "Z" and "NZ" types are available with a power-saving circuit.

❹ Wiring specification

WO	Without M12 connector cable

❺ Port piping type

U	Bottom ported

❻ 1(P), 4(A), 2(B), 5(EA), 3(EB) port size [Thread piping/One-touch fitting (Metric/Inch size)]

Symbol	Fitting specifications		P, A, B, EA, EB port One-touch fitting size	Note	
				X, PE*2 port	VENT port
02F	Without fitting		G1/4 Thread piping	M5 Thread piping	M5 Thread piping
B8	Metric size Threaded One-touch fitting	Brass fitting	ø8*1	ø4	ø4*3
B10			ø10		
G8		Stainless steel fitting	ø8*1		
G10			ø10		
BN9	Inch size Threaded One-touch fitting	Brass fitting	ø5/16"*1	ø5/32"	ø5/32"*3
BN11			ø3/8"		
GN9		Stainless steel fitting	ø5/16"*1		
GN11			ø3/8"		

*1 For B8/G8 (ø8) and BN9/GN9 (ø5/16"), the same fitting is used for them.
*2 In the case of external pilot type, fittings are attached to the X and PE ports according to the above fitting type.
*3 For X, PE port and VENT port of ø4 and ø5/32", the same fitting is used.

❼ Mounting option

Nil	None
L*1	Mounting leg (90 mm)

*1 Mounting legs are shipped together with the product.

⚠ Caution
If the product is to be continuously energized, please be sure to select the power-saving circuit (continuous duty type) specification.

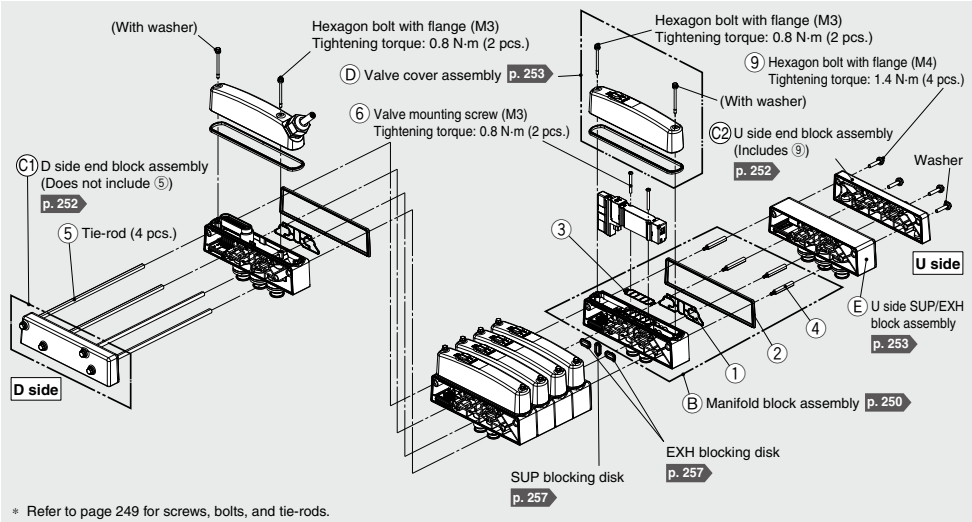
Manifold Exploded View (Common Parts)



∗ Refer to page 249 for screws, bolts, and tie-rods.

How to Increase Manifolds

1 **Loosen the hexagon bolt with flange ⑨ on the U side, and remove the C2 U side end block assembly.**

(For SUP/EXH from both sides, remove the E U side SUP/EXH block assembly.)

∗ Do not loosen the hexagon bolt with flange of D side as the tie-rod is fixed to the C1 D side end block assembly.

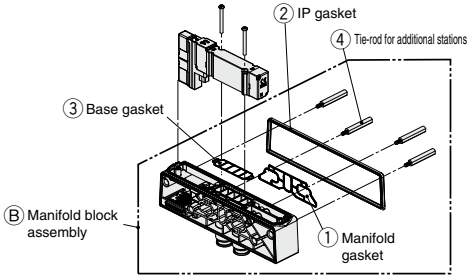
2 **Screw in ④ tie-rods for additional stations to the ⑤ tie-rod of the manifold.**

(Screw them in until there is no gap between the tie-rods.)

3 **Connect B manifold block assembly and C2 U side end block assembly that need to be added, and tighten ⑨ hexagon bolt with flange on the U side. For SUP/EXH from both sides, also connect the E U side SUP/EXH block. (4 places, more than 2 turns)**

(Make sure that the washers are assembled to the hexagon bolt with flange. When mounting the manifold, make sure that the gasket is not misaligned, damaged, forgotten to be attached, and that there are not foreign objects.)

Hexagon bolt with flange (M4) Tightening torque: 1.4 N·m
(M3) Tightening torque: 0.8 N·m



Gaskets are mounted.

Manifold block assembly

No.	Description	Quantity
①	Manifold gasket	1 pc. (Mounted)
②	IP gasket	1 pc. (Mounted)
③	Base gasket	1 pc. (Mounted)
④	Tie-rod for additional stations	4 pcs. (Included)

∗ Refer to page 249 for ordering single unit.

⚠ Caution

1. Be sure to shut off the power and air supplies before disassembly.
Furthermore, since air may remain inside the actuator, piping, and manifold, confirm that the air is completely exhausted before performing any work.

2. When disassembly and assembly are performed, air leakage may result if the tightening of the hexagon bolt with flange is inadequate.

3. Rubber parts are attached to the metal parts of the washer. If they are misaligned or dislodged, return them to their normal position.

I/O occupation area (Inputs/Outputs)		0/32, 16/32*2
Communication speed		COM3/COM2*2
Communication connector specification		M12*3
Power supply for control	**Power supply voltage**	18 to 30 VDC
	Internal current consumption	50 mA or less
Power supply for output	**Power supply voltage**	22.8 to 26.4 VDC
Output	**Output type**	Source/PNP (Negative common)
	Number of outputs	32
	Load	Solenoid valve with surge voltage suppressor of 24 VDC, 0.4 W or less (SMC)
	Supplied voltage	24 VDC
	Supplied current	Max. 0.54 A
Environmental resistance	**Operating temperature range**	–10 to 50°C
	Operating humidity range	35% to 85% RH (No condensation)
	Withstand voltage	500 VAC for 1 minute between terminals and housing
	Insulation resistance	10 MΩ or more (500 VDC measured via megohmmeter) between terminals and housing
Standards		CE/UKCA marking (EMC directive/RoHS directive)
Weight		100 g

*1 The configuration file can be downloaded from the SMC website: https://www.smcworld.com
*2 A selection can be made using the setting switch.
*3 The M12 connector is located on the SUP/EXH block on the manifold D side.

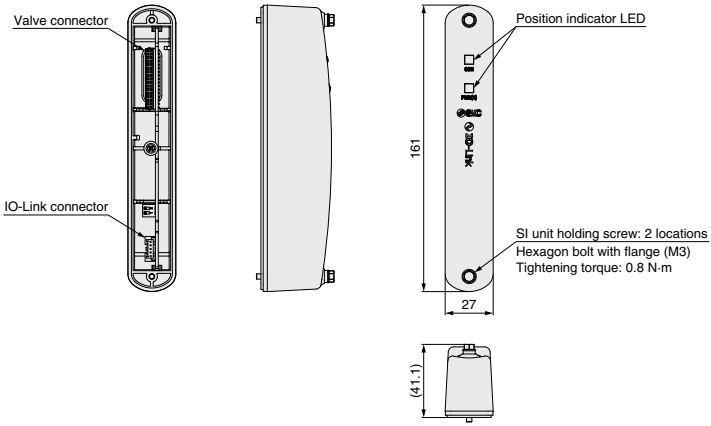
Y Branch Connector for IO-Link

This connector is used to supply power to the valve manifold by branching the IO-Link communication cable in cases where a port class A IO-Link master is used.

This branch connecter has an IP67 enclosure.

For details, refer to page 1331.

Dimensions



■FDA Compliant Metal One-touch Fittings
Hexagon Socket Head Male Connector

		Port size		Brass C3604 (Electroless nickel plating)	Stainless steel 316
Metric size	Manifold block	2-port type: 4(A), 2(B) port 5-port type: 1(P), 4(A), 2(B), 5(EA), 3(EB) port	ø8∗1	KQB2S08-G02-F	KQG2S08-G02-F
			ø10	KQB2S10-G02-F	KQG2S10-G02-F

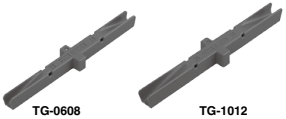
Metal plug

∗1 For the 4(A) and 2(B) port of ø8 or ø5/16", the same fitting is used for them.
∗2 For the VENT port of ø4 and ø5/32", the same fitting is used for them.

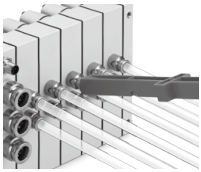
■Tube Releasing Tools (This tool is used for removing the tube from the 4(A) and 2(B) port.)

Part no.	TG-0608	TG-1012
Applicable tubing O.D.	ø6/ø8	ø10/ø12

∗ Tube releasing tools are not applicable for all port sizes.



TG-0608 **TG-1012**
Tube releasing tools



For details on the tube removal procedure, refer to the JSY1000/3000/5000 Web Catalog.

Manifold Options

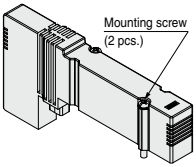
■Blanking plate

[With two mounting screws]

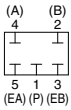
Used when valve additions are expected or for maintenance

Blanking plate (Single unit)

JSY51M – 26P – 1A



JSY51M-26P-1A



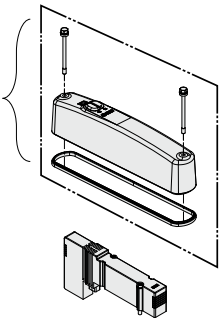
Circuit diagram

Valve cover assembly with blanking plate

JSY51M – 26P – 1A C

With valve cover

For the valve cover assembly, refer to "Manifold Parts Nos." on page 253.



■SUP/EXH blocking disk

[SUP blocking disk]

By inserting the SUP blocking disk in the pressure supply passage of the manifold valve, can provide two different high and low pressure in one manifold.

[EXH blocking disk]

By inserting the EXH blocking disk in the exhaust passage of the manifold valve, can separate the exhaust from the valve so it does not affect the other valves. It can also be used for the manifold for the positive pressure and vacuum mixed manifold. **(2 pieces are required to block EA/EB both sides of the EXH.)**

* When ordering a manifold, if the blocking disk is ordered at the same time in the manifold specifications, the laser printed blocking disk symbol will be displayed in the manifold block assembly that includes the blocking disk. Refer to the manifold block assembly on page 250 for the contents.

Series	SUP blocking disk	EXH blocking disk
JSY5000	JSY51M-40P-2A	JSY51M-40P-2A

JSY5000-H Series
Made to Order

Please contact SMC for detailed dimensions, specifications, and delivery times.

Made to Order

1 External Pilot

How to Order Manifolds

Refer to the How to Order manifolds for each type on page 234.

Caution This is an IP69K compliant product. The manifold and valves are ordered as a set.

Lead wire type

JJ5SY5 – H11L1 □ – □□ R – □□

Fieldbus type (IO-Link)

JJ5SY5 – H11SKAN – □□ R – □□

Pilot type

R	External pilot

How to Order Valves

JSY5□03R□ – 5□□ – H

Coil type

Pilot type

R	External pilot

* External pilot specification is not applicable for 4-position dual 3-port valves.
* When pilot type "R" is selected, select the external pilot type "R" for the manifold pilot type.

How to Order Sub-plates (With Valve/Valve Cover)

Refer to the How to Order sub-plates on page 243.

JSY5□03R□ – 5□□ – H – WO – U□□

Coil type

Pilot type

R	External pilot

* External pilot specification is not applicable for 4-position dual 3-port valves.

JSY5000-H Series
Specific Product Precautions 1

Be sure to read this before handling the products. For safety instructions and 3/4/5-port solenoid valve precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

Environment

⚠Warning

1. Do not use valves in atmospheres of corrosive gases, chemicals*1, sea water, water vapor, or where there is direct contact with any of these.

*1 Check section on cleaning and the product component list of the external materials used, and ensure compatibility with any chemicals used in the cleaning solution.

2. Avoid installing and using inside a food zone.

· Not installable
Food zone: An environment where food which will be sold as merchandize, directly touches the manifold parts
· Installable
Splash zone: An environment where food which will not be sold as merchandize, directly touches the manifold parts
Non-food zone: An environment where there is no contact with food

■IP69K (IEC/EN 60529/ISO 20653) compliant product

1. IP69K is only guaranteed to the factory condition (finished as a manifold).

2. IP69K compliant products are protected against dust and high pressure hot water. However, when using the valve, keep within the ambient temperature and fluid temperature. (No freezing)

3. IPX9K compliant products are protected against dust and high pressure hot water jetwash.

When cleaning the manifold, it is recommended to keep the distance from the washer nozzle to the manifold at least 20 cm. Wash the manifold while moving the nozzle. Do not fix the cleaning point to one place.

4. Refer to the tightening torque in the disassembly drawing of the manifold (p. 248) when increasing or decreasing the number of stations for IP69K compliance. When installing the manifold, make sure that the gasket is not misaligned, forgotten to be attached, and that there are not foreign objects.

How to Use

⚠Caution

■VENT port

1. A VENT port is installed on the manifold so that even if a valve leaks, the leaked pressure does not accumulate inside.

2. Prevent liquid from entering the VENT port.

3. Do not block the VENT port. If the VENT port is used with the port closed, internal pressure may build up and the product gasket may come off and IP69K is not satisfied.

4. Do not pressurize the VENT port. The sealing performance of the gasket will be reduced and the IP69K may not be satisfied.

5. Do not pipe the VENT port and the exhaust port (3/5 port) in the same piping. The back pressure of the exhaust port may be applied to the VENT port, increasing the internal pressure.

How to Use

⚠Caution

Hexagon socket head male connector (KQB2S)

■Metal One-touch fittings

1. When tightening the hexagon socket head male connector, use a suitable hexagon wrench, and connect the piping carefully so as not to deform or damage the inside of the connector. If the inside of the connector is deformed or damaged, the falling out of tubes may occur.

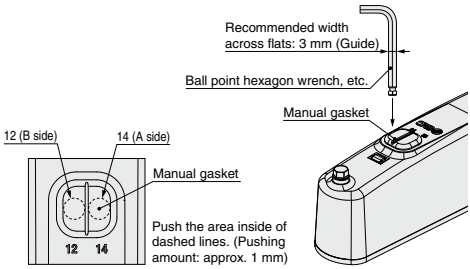
2. Uni thread fittings cannot be used. When using Uni thread fittings, the tightening load on the chamfered part of the female thread on the manifold side can cause the female thread side to deform or break.

3. Tighten fittings with the proper tightening torques in the table below.

Connection port	Connection thread size	Proper tightening torque [N·m]
VENT	M5	1 to 1.5
X, PE	G1/8	2.9 to 3.2
2(B), 4(A)	G1/4	5.7 to 6.3
1(P), 3(EB), 5(EA)	G1/2	14.3 to 15.8

■Manual override

Use a rounded tool (such as a ballpoint hex wrench) for manual override operations. Manipulating manual override with a sharp tool will damage the manual gasket and the IP69K is not satisfied.



Valve/Manifold Parts Mounting

⚠Caution

Mount it so that there is no slippage or deformation in gaskets, and tighten with the tightening torque shown below.

Thread size	Tightening torque	Tightening location
M3	0.8 N·m	Valve, Valve cover, SI unit
M4	1.4 N·m	End block
M6	4.9 N·m	Mounting leg (Option)

JSY5000-H Series
Specific Product Precautions 2

Be sure to read this before handling the products. For safety instructions and 3/4/5-port solenoid valve precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

Used as a 3-Port Valve

⚠Caution

■In case of using a 5-port valve as a 3-port valve

The JSY5000 series can be used as normally closed (N.C.) or normally open (N.O.) 3-port valves by closing one of the cylinder ports 4(A) or 2(B) with a plug. However, they should be used with the exhaust ports kept open. Use them when a double solenoid type 3-port valve is required.

Plug position		B port	A port
Type of actuation		N.C.	N.O.
Number of solenoids	Single		
	Double		

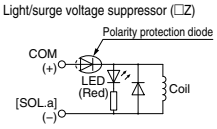
Light/Surge Voltage Suppressor

⚠Caution

■Polar type

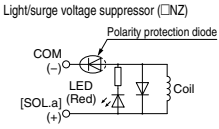
Positive common

Single solenoid



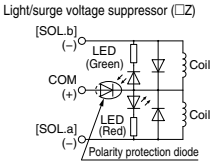
Negative common

Single solenoid



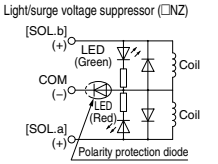
Positive common

Double solenoid, 3-position, 4-position



Negative common

Double solenoid, 3-position, 4-position

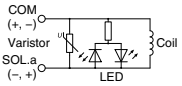


∗ Serial transmission type is not applicable for the positive common.

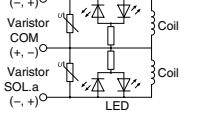
■Non-polar type

With light/surge voltage suppressor (□U)

Single solenoid



Double solenoid



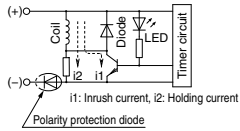
Light/Surge Voltage Suppressor

⚠Caution

■With power-saving circuit

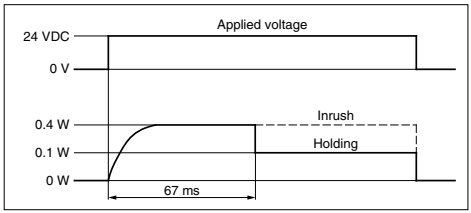
Power consumption is decreased to approx. 1/4 compared with the standard product by reducing the wattage required to hold the valve in an energized state. (Effective energizing time is over 67 ms at 24 VDC.)

Electric circuit diagram (With power-saving circuit)
In the case of single solenoid



The circuit shown above reduces the power consumption for holding in order to save energy. Refer to the electrical power waveform as shown below.

<Electrical power waveform with power-saving circuit>



· Since the voltage will drop by approx. 0.5 V due to the transistor, pay attention to the allowable voltage fluctuation. (For details, refer to the solenoid specifications of each type of valve.)

Residual voltage of the surge voltage suppressor

∗ If a varistor or diode surge voltage suppressor is used, there is some residual voltage to the protection element and rated voltage. Therefore, refer to the table below and pay attention to the surge voltage protection on the controller side. Also, since the response time does change, refer to the response time on page 230.

Residual Voltage

Surge voltage suppressor	24 VDC
Z	Approx. 1 V
U	Approx. 47 V

Continuous Duty

⚠Caution

If a valve is energized continuously for long periods of time, the rise in temperature due to heat-up of the coil assembly may cause a decline in solenoid valve performance, reduce service life, or have adverse effects on peripheral equipment. If the valve is energized continuously or if the A side and B side of the dual 3-port valve are energized simultaneously, be sure to use a valve with power-saving circuit.

Energization of a 2-Position Double Solenoid Valve

⚠Caution

To avoid operation failure, do not energize the A side and B side of 2-position double solenoid valve at the same time.

Specific Product Precautions 3

Be sure to read this before handling the products. For safety instructions and 3/4/5-port solenoid valve precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smcworld.com

Countermeasure for Surge Voltage Intrusion

⚠Caution

■ Surge voltage intrusion

With non-polar type valves, at times of sudden interruption of the loading power supply, such as emergency shutdown, surge voltage intrusion may be generated from loading equipment with a large capacity (power consumption), and a valve in a de-energized state may switch over (see Fig. 1).
When installing a breaker circuit for the loading power supply, consider using a valve with polarity (with polarity protection diode), or install a surge absorption diode between the loading equipment COM line and the output equipment COM line (see Fig. 2).

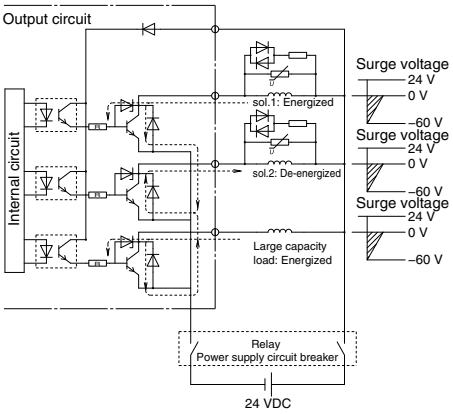


Fig. 1 Surge intrusion circuit example (NPN outlet example) (24 VDC)

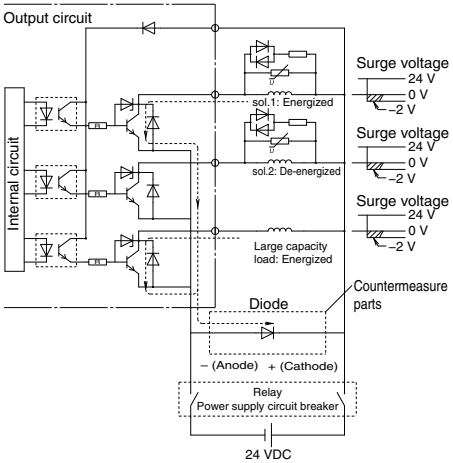

Fig. 2 Surge intrusion countermeasure example (NPN outlet example) (24 VDC)

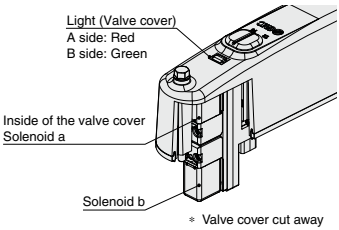
Light Indication

⚠Caution

When equipped with indicator light and surge voltage suppressor, the light window turns red when solenoid a is energized, and it turns green when solenoid b is energized.



Substrate inside Manifolds

⚠Caution

The substrate inside of manifolds cannot be taken apart.
Attempting to do so may damage parts.

Other Tube Brands

⚠Caution

1. When using other than SMC brand tube, confirm that the following specifications are satisfied with respect to the tube outside diameter tolerance.

1) Nylon tubing Within ±0.1 mm
2) Soft nylon tubing Within ±0.1 mm
3) Polyurethane tubing Within +0.15 mm, Within –0.2 mm

Do not use tubing which does not satisfy the specified tubing O.D. accuracy, or tubing with an I.D., material, hardness, or surface roughness that differs from SMC's tubing. Please consult SMC if anything is unclear. It may cause difficulty in connecting the tubing, leakage, disconnection of the tubing, or fitting damage.

When used with tubing other than those from SMC, due to their properties, the KQG2 and KQB2 are not subject to warranty.

2. When using fittings other than those from SMC, be certain to confirm that the operating conditions are such that no problems will arise.

Specific Product Precautions 4

Be sure to read this before handling the products. Refer to page 7 for safety instructions and pages 8 to 14 for 3/4/5 port solenoid valve precautions.

One-touch Fittings

⚠Caution

■Installation and removal of tubing for One-touch fittings

1) Installation of tubing

(1) Cut the tubing perpendicularly, being careful not to damage the outside surface. Use an SMC tube cutter TK-1, 2, 3, 5, or 6. Do not cut the tubing with pliers, nippers, scissors, etc., otherwise the tubing will be deformed and problems may result. Allow some extra length in the tube.

(2) The outside diameter of the polyurethane tubing swells when internal pressure is applied to it. Therefore, it may be impossible to re-insert the tubing into the One-touch fitting. Check the tubing outside diameter, and when the accuracy of the outside diameter is +0.07 mm or larger for ø2, +0.15 mm or larger for other sizes, re-insert it into the One-touch fitting without cutting the tubing. When the tubing is re-inserted into the One-touch fitting, confirm that the tubing goes through the release button smoothly.

(3) Grasp the tubing, and slowly push it straight (0 to 5°) into the One-touch fitting until it comes to a stop.

(4) Pull the tubing back gently to make sure it has a positive seal. Insufficient installation may cause air to leak or the tubing to release.

As a guide for checking if the tubing is pulled out or not, refer to the following table.

Tubing size	Tensile force of tubing [N]
ø2, ø3.2, ø1/8"	5
ø4, ø5/32", ø3/16"	8
ø6, ø1/4"	12
ø8, ø5/16"	20
ø10, ø3/8"	30
ø12, ø1/2"	35
ø16	50

2) Removal of tubing

Use the release tool when the removal of tube is difficult due to the tube size. Refer to page 256 for releasing tools.

(1) Push the release button flange evenly and sufficiently to release the tube. Do not push in the tubing before pressing the release button.

(2) Pull out the tubing while keeping the release button depressed. If the release button is not held down sufficiently, the tubing cannot be withdrawn.

(3) To reuse the tubing, remove the previously lodged portion of the tubing. If the lodged portion is left on without being removed, it may result in air leakage and make the removal of the tubing difficult.

Installation

⚠Caution

Even though the inlet pressure is within the operating pressure range, when the piping diameter is restricted due to size reduction of supply port 1(P), the flow will be insufficient. In this case, the valve does not switch completely and the cylinder may malfunction.

Maintenance

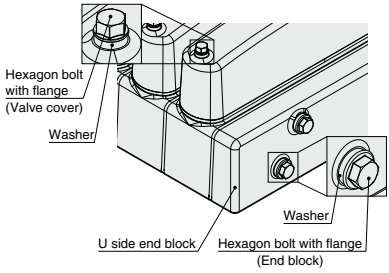
⚠Caution

1. Regular inspection and tightening of the hexagon bolts with flange is recommended at 3 months intervals, to satisfy IP69K. (Recommended inspection interval: 3 months)

For the tightening location and tightening torque, see the exploded view of the manifold (p. 248).
Please replace the washer if it is damaged.

2. When disassembling by removing the hexagon bolt with flange, make sure that there is not moisture on the outer surface of the product. If the product is disassembled or assembled with moisture attached, moisture may enter the inside of the manifold and cause damage.

3. Make sure that the washers are in good condition, in position and assembled when tightening the hexagon bolt with flange.



EX430 Series
Specific Product Precautions 1

Be sure to read this before handling the products.
Refer to page 7 for safety instructions.

Design / Selection

⚠ Warning

1. Do not use beyond the specification range.
Using beyond the specification range may result in a fire, malfunction, or damage to the system.
Check the specifications before operation.

2. When using for an interlock circuit:
- **Provide a multiple interlock system which is operated by another system (such as a mechanical protection function).**
- **Perform an inspection to confirm that it is working properly.**

Failure to do so may result in possible injuries due to malfunction.

⚠ Caution

1. Use within the specified voltage range.
Using beyond the specified voltage range is likely to cause product damage or malfunction.

2. Do not install in places where it can be used as a foothold.
Applying any excessive load such as stepping on the product by mistake or placing a foot on it will cause it to break.

3. Keep the surrounding space free for maintenance.
When designing a system, take into consideration the amount of free space needed to perform maintenance.

4. Beware of inrush currents when the power supply is turned on.
Some connected loads can apply an initial charge current which will trigger the over current protection function, causing the product to malfunction.

Mounting

⚠ Caution

1. When handling and assembling products:
- **Do not apply excessive force to the product when disassembling.**
The connecting parts of the product are firmly joined with seals.
- **When joining units, take care not to get your fingers caught between the products.**
Injury may result.

2. Do not drop, bump, or apply excessive impact to the product.
Doing so may result in damage, equipment failure, or malfunction.

Mounting

⚠ Caution

3. Observe the tightening torque range.
Tightening outside of the allowable torque range will likely damage the screw.
IP69K cannot be guaranteed if the screws are not tightened to the specified torque.

4. When lifting a large solenoid valve manifold, take care to avoid causing stress to the valve connection joint.
The connection parts of the product may be damaged.
Because the product may be heavy, carrying and installation should be performed by more than one operator to avoid strain or injury.

5. When installing the product, mount it on a flat surface.
Torsion in the whole product may lead to problems such as air leakage or contact failure.

Wiring

⚠ Caution

1. Avoid repeatedly bending or stretching the cable and applying heavy objects or force to it.
Wiring where repeated bending and tensile stress are applied to the cable may result in circuit breakage.

2. Avoid miswiring.
If miswired, there is a danger of malfunction or damage to the product.

3. Do not wire while energizing the product.
There is a danger of malfunction or damage to the product or input/output device.

4. Avoid wiring the power line and high-voltage line in parallel.
Signal line noise or surge from the power line or high-pressure line could cause a malfunction.
Wiring of the product or input/output device and the power line or high-voltage line should be separated from each other.

5. Check the wiring insulation.
Defective insulation (contact with other circuits, improper insulation between terminals, etc.) may cause damage to the product or input/output device due to excessive voltage or current.

Specific Product Precautions 2

Be sure to read this before handling the products.
Refer to page 7 for safety instructions.

Wiring

⚠ Caution

6. When the product is installed in machinery/equipment, provide adequate protection against noise by using noise filters, etc.

Noise in signal lines may cause a malfunction.

7. When connecting wires, prevent the entry of water, solvent, or oil from the connector section.

Failure to do so may result in damage, equipment failure, or malfunction.

8. Avoid wiring patterns in which excessive stress is applied to the connector.

Failure to do so may result in equipment failure or malfunction due to contact failure.

Operating Environment

⚠ Warning

1. Do not use in atmospheres containing inflammable or explosive gases.

Use in such atmospheres is likely to cause a fire or explosion.

This product is not explosion proof.

⚠ Caution

1. Provide adequate protection when operating in locations such as the following.

Failure to do so may cause a malfunction or equipment failure. The effect of countermeasures should be checked in individual equipment and machines.

1) Where noise is generated by static electricity, etc.

2) Where there is a strong electric field

3) Where there is a danger of exposure to radiation

4) When in close proximity to power lines or high-voltage lines

2. Do not use in environments where oil and chemicals are used.

Operating in environments where coolants, cleaning solvents, various oils, or chemicals are present may cause adverse effects (damage, malfunction, etc.) to the product even within a short period of time.

3. Do not use in environments where the product could be exposed to corrosive gases or liquids.

Use in such environments may cause product damage or malfunction.

Operating Environment

⚠ Caution

4. Select the proper type of enclosure according to the operating environment.

IP69K is achieved when the following conditions are met.

1) Provide appropriate wiring using communication cables with M12 connectors.

2) Appropriately mount the SI unit and the manifold valve.

5. Do not use in locations with sources of surge generation.

Installation of the product in an area around equipment (electromagnetic lifters, high-frequency induction furnaces, welding machines, motors, etc.) which generates large surge voltages could cause an internal circuitry element of the product to deteriorate or result in damage. Implement countermeasures against the surge from the generating source, and avoid contact between the lines.

6. When directly driving a load which generates a surge voltage by relay, solenoid valve, or lamp, use a load that has an integrated surge-absorption element.

When a surge generating load is directly driven, the product may be damaged.

7. The product is CE/UKCA marked but not immune to lightning strikes. Take measures against lightning strikes in your system.

8. Keep dust, wire scraps, and other foreign matter from entering the product.

Such materials may cause equipment failure or malfunction.

9. Mount the product in a location, which is not affected by vibration or shock.

Failure to do so may cause equipment failure or malfunction.

10. Do not use in direct sunlight.

This may cause equipment failure or malfunction.

11. Use within the ambient temperature range.

Failure to do so may cause a malfunction.

12. Do not use in places where radiated heat may affect the product.

Such places are likely to cause a malfunction.

EX430 Series
Specific Product Precautions 3

Be sure to read this before handling the products.
Refer to page 7 for safety instructions.

Adjustment / Operation

⚠Warning

1. Do not perform operation or setting with wet hands.
There is a risk of electrical shock.

⚠Caution

1. Use a watchmaker's screwdriver with a thin blade for the setting switch.
When setting the switch, do not touch any unrelated parts.
This may cause parts damage or malfunction due to a short circuit.

2. Perform appropriate setting for the operating conditions.
Failure to do so could result in malfunction.
Refer to the Operation Manual for details on setting each switch.

3. For details on programming and address setting, refer to the manual from the PLC manufacturer.
The programming content related to the protocol is designed by the manufacturer of the PLC used.

Maintenance

⚠Warning

1. Do not disassemble, modify (including circuit board replacement), or repair this product.
Such actions are likely to cause injuries or equipment failure.

2. When an inspection is performed:
- **Turn off the power supply.**
- **Stop the air supply, exhaust the residual pressure in the piping, and confirm that the air has been released before performing maintenance work.**

Failure to do so may result in the unexpected malfunction of system components or injury.

⚠Caution

1. When removing from/attaching to the valve manifold:
- **Do not apply excessive force to the unit.**
The connecting parts are firmly joined with seals.
- **Take care not to get your fingers caught.**
Injury may result.

2. Perform periodic inspection.
Unexpected malfunction in the system composition devices is likely to occur due to malfunction of machinery or equipment.

3. After maintenance, make sure to perform an appropriate functionality inspection.
When abnormalities such as faulty operation occur, stop operation immediately. Unexpected malfunction in the system composition devices is likely to occur.

4. Do not use benzine or thinner for cleaning the product.
Damage to the surface or erasure of the display may result. Wipe off any stains with a soft cloth.
If the stain is persistent, soak a cloth in a dilute solution of neutral detergent, wring it out sufficiently, wipe the product, and then finish with a dry cloth.

Other

⚠Caution

1. Refer to the catalog of each series for Common Precautions and Specific Product Precautions for valve manifolds.
